

RECOMMENDATION SET 1

- **0. Computer Science**

- University College Dublin
- **540** points
- **Overview:** The UCD Computer Science degree covers the fundamentals of Computer Science while also exposing students to the contemporary languages and technologies used in the industry. Key topics include programming, foundational mathematics, advanced software engineering, cloud development, theory of computer science, networks and security. The principal programming languages used are C, Java and Python. Specialised topics include computer graphics, game development, robotics, mobile development and others.
- **Why we recommended this:** Your strong analytical mind and deep interest in technology make Computer Science an ideal fit, allowing you to master programming and solve complex digital problems through software engineering.

- **1. Artificial Intelligence and Machine Learning**

- University of Limerick
- **487** points
- **Overview:** The Bachelor of Science programme is of four years duration. In the first year the student will undertake an intensive learning programme of computer science fundamentals, programming including an immediate introduction to an AI-appropriate language, and mathematics. In subsequent years the focus on artificial intelligence will intensify while also including core computer science aspects such as operating systems, data structures and algorithms, database systems, computer graphics. Data analytics / mining and more specialist topics such as language engineering / translation and cultural aspects of AI are covered in later years. Students who opt to exit after four years with a bachelors degree will complete, in their final year, a year-long Final year Project that is the culmination of their studies drawing on their skills in research, algorithm or system design, and implementation.
- **Why we recommended this:** Given your passion for computing and logic, Artificial Intelligence and Machine Learning offers the perfect challenge to explore advanced algorithms and research-driven technological innovation.

- **2. Computer Science (International)**

- TU Dublin - Grangegorman
- **351** points
- **Overview:** This course will provide you with the knowledge and skills to work as a global software engineer or as an application developer, able to develop as needed in an ever-changing global industry. On graduation, you'll be qualified to work in the international IT industry in a wide range of computer roles. You'll have a strong foundation in such areas as Internet development, cloud computing, mobile software, enterprise systems, artificial intelligence and games technology.
- **Why we recommended this:** Computer Science (International) aligns with your technical strengths and interest in software development, preparing you to design innovative applications and systems for a global technology industry.

- **3. Computer Science (Infrastructure)**

- TU Dublin - Grangegorman
- **346** points
- **Overview:** Computer Science (Infrastructure) is about developing software and infrastructure for applications ranging from those on smart devices to those in global corporations. This course provides the skills required to build data centres and networks, and to develop software securely, individually and in teams. You'll gain a working knowledge of the components of a computer and a network, become familiar with the components of an operating system, and learn to administrate large distributed systems.
- **Why we recommended this:** Computer Science (Infrastructure) matches your preference for technical problem-solving, focusing on the essential building blocks of technology like data centers, networks, and secure distributed systems.

- **4. Mobile & Web Computing**

- TUS Midwest
- **280** points
- **Overview:** Mobile and Web Computing provides students with the theoretical and practical skills necessary to design, build and maintain secure internet based systems. There is a strong practical emphasis on the languages, tools, techniques and methodologies required to build real world solutions in today's inter-connected world. The considerable practical emphasis on the course allows for the smooth integration of graduates into the workplace. Students will develop an understanding of current and emerging technologies and best business/industrial standards to equip them to meet the demands of an increasingly technological world. The course will provide students with the professional, technical and project related capabilities applicable to the development of secure client-side and server-side Internet based systems and prepares students for a broad range of careers in the fast moving computing industry.
- **Why we recommended this:** Your aptitude for technical systems makes Mobile & Web Computing a great choice, focusing on the practical design and maintenance of secure, real-world internet and mobile solutions.

- **5. Immersive Software Engineering**

- University of Limerick
- **651** points
- **Overview:** Immersive Software Engineering is a new computer science degree where you learn by doing. You get an integrated Bachelors/Masters qualification (level 9) in four years. You spend half your time learning on campus in a research-driven paradigm, in studios, working on projects, in teams, undergoing continuous assessment instead of end of term exams. You spend the other half of your time in paid residencies, where you solve some of society's toughest problems in excellent companies. The goal of Immersive Software Engineering is to turn curious, creative people like you into top notch problem solvers and software engineers, familiar with concepts, methods and tools, and with about 2 years of experience gained in the field in up to 5 companies.
- **Why we recommended this:** Immersive Software Engineering suits your preference for active, project-based learning, allowing you to apply your strong analytical skills to solve real-world problems in high-impact professional settings.

- **6. Genetics and Cell Biology**

- Dublin City University
- **518** points
- **Overview:** By studying on this programme, you can come to understand the genetic basis for life and how this information can be used to investigate, diagnose and treat diseases. You'll also gain practical laboratory skills, as well as skills in communications, critical thinking and problem-solving. Furthermore, you'll gain skills in computational biology, which uses high-tech data analysis and modelling to help harness genetic and biological insights.
- **Why we recommended this:** Genetics and Cell Biology appeals to your inquisitive nature, using computational tools and high-tech data analysis to investigate the fundamental biological blueprints of life and disease.

- **7. Data Science**

- Dublin City University
 - **500** points
 - **Overview:** Fancy a career as a professional problem solver, investigator and storyteller? That's exactly what a data scientist is. From retail and sports science to journalism and fintech, data scientists are increasingly at the heart of business and government. Whether it's enabling product recommendations or helping a sports team decide what player to buy next, data science can unlock the secrets of any sector. If you like maths, creative problem solving and collaborative work, data science could really appeal to you. This course sits at the intersection of computer science, maths and business, enabling you to understand what is possible with cutting-edge technology such as machine learning and artificial intelligence.
 - **Why we recommended this:** Data Science perfectly blends your love for computers and analytical thinking, challenging you to use mathematics and machine learning to uncover meaningful insights from complex information.
- **8. Computational Social Science**
 - University College Dublin
 - **490** points
 - **Overview:** The world around us is undergoing significant changes due to digitization and deployment of Artificial Intelligence. Today we are more interconnected than ever before. As we navigate this new social landscape, we leave behind digital footprints that can be analyzed and interpreted through the lens of Computational Social Science. This field of study leverages the power of big data, computer simulations, and social network analysis to gain insights into social phenomena and individual behaviour.
 - **Why we recommended this:** Computational Social Science utilizes your technological skills to analyze digital footprints, applying big data and computer simulations to understand human behavior and evolving social landscapes.
- **9. Biomedical and Molecular Diagnostics**
 - TU Dublin - Grangegorman
 - **489** points
 - **Overview:** Biomedical Science is the science related to medical conditions - their causes, diagnosis and treatment. Molecular diagnostics is the use and development of novel technologies to enable faster and more personalised diagnosis, often using DNA-based approaches. A unique feature of the course is the way diagnostic and analytical sciences are integrated with bioproduct design and development. It also includes modules in transferable skills such as basic programming and bioinformatics.
 - **Why we recommended this:** Biomedical and Molecular Diagnostics bridges your interests in technology and science, focusing on using DNA-based approaches and programming to develop next-generation medical diagnostic tools.
- **10. Mechatronic Engineering**
 - Dublin City University
 - **533** points
 - **Overview:** This course all about how we build intelligent machines through the meeting of mechanical systems such as engines and machines with the electronics needed to control them. This course perfectly blends mechanical engineering and electronic engineering. It offers classes in 3D modelling and design, for example, as well as circuit design and programming. Our students and staff are intrigued and inspired by the interplay between electronics and moving parts in connected devices and state-of-the-art machinery. Gain knowledge for the real world. In third year, you'll get to do a six-month INTRA work placement and throughout the course, you'll do lots of project-based learning where you use the latest real-world tools and technologies to solve problems and, of course, build robots. That's not all. You'll also take some business-based modules, so you can learn how to develop a business plan and work with other parts of an enterprise. While you can go on from this course to work in either mechanical or electronic engineering, our graduates typically end up in roles where they incorporate one into the other. For example, they might put sensors into a machine to measure aspects of how it's working or develop control systems for a lift or a car. Either way, mechatronics graduates are in huge demand.
 - **Why we recommended this:** Mechatronic Engineering combines your technical curiosity with hands-on application, focusing on building intelligent machines and robots by integrating mechanical systems with sophisticated electronic controls.
- **11. Electronic and Computer Engineering**
 - Dublin City University
 - **531** points
 - **Overview:** Calling maths lovers! If you'd like to be able to fix a gaming remote or build a smart doorbell from scratch, you need to study Electronic and Computer Engineering. Across the first three years, you'll study the fundamentals of electronic engineering and programming. As this course covers a broad field, you'll choose one of four specialisms in fourth year: Systems and Devices (covering sensors, diagnostics and more), High-Speed Networks (such as fibre optics and 5G), Digital Interaction (including 3D interfaces and game design), and the Internet of Things.
 - **Why we recommended this:** Electronic and Computer Engineering suits your interest in how things work, offering a path to master programming and hardware design for everything from gaming to smart devices.
- **12. Electrical & Electronic / Computer & Communications Engineering**
 - TU Dublin - Grangegorman
 - **490** points
 - **Overview:** This course will educate you to an honours level in electrical and electronic engineering. It meets the educational standard required for chartered engineering membership of Engineers Ireland. You can specialise in Power Systems Engineering, Control Engineering, Communications Engineering, Electronic Engineering, or Computer Engineering.
 - **Why we recommended this:** Electrical & Electronic / Computer & Communications Engineering aligns with your analytical strengths, providing specialized technical training in power systems, communications, and the complex infrastructure of modern engineering.
- **13. Engineering**
 - Trinity College Dublin
 - **577** points
 - **Overview:** Engineering is about being creative in technical problem solving. Engineers make things possible by using mathematical and scientific principles together with analytical and design skills. They tackle existing problems by developing new solutions through innovative technologies. They also expand the frontiers of society by developing advanced materials, sustainable energy systems, construction technologies, transport systems, biomedical devices, and telecommunications infrastructure.
 - **Why we recommended this:** Engineering offers a creative outlet for your technical problem-solving abilities, using mathematical and scientific principles to develop innovative solutions for global challenges and advanced technologies.
- **14. Aeronautical Engineering**
 - University of Limerick
 - **556** points
 - **Overview:** The Bachelor of Engineering (B.E.) and Masters of Engineering (M.E.) programmes are 4 years and 5 years in duration, respectively. Both include an eight month period of Cooperative Education spent in an appropriate industrial environment. The course provides a broad and practical programme of study, which gives you a good understanding of aircraft design, aerodynamics, structures, propulsion, control, materials, avionics, business and maintenance, and enables you to work in all sectors of the aerospace industry.
 - **Why we recommended this:** Aeronautical Engineering matches your interest in technical systems and design, focusing on the complex aerodynamics and structural science required to innovate within the aerospace industry.

- **15. Mechanical & Manufacturing Engineering**

- Dublin City University
- **542** points
- **Overview:** Can you imagine designing and building a better electric vehicle, jet engine or wind turbine? Maybe you've figured out a way to improve inhalers or door handles. If you're fascinated by how things work and are made, enjoy getting caught up in the details, and thrive as part of a team, choose Mechanical and Manufacturing Engineering. Our students take things apart, figure out how they work and how to fix or improve them, then put them back together again. You'll get to use 3D printers and other advanced tools in DCU's state-of-the-art labs, while also absorbing engineering theory. It is at heart a maths-based course, but you'll also gain extensive skills and knowledge in engineering mechanics, computer simulation and analysis, design and manufacture, and project management. In third year, you'll do an eight-month work placement in industry and you also have the opportunity to study abroad. And you can extend your undergraduate BEng programme by a year to complete a masters degree.
- **Why we recommended this:** Mechanical & Manufacturing Engineering appeals to your fascination with how things are made, using computer simulations and maths-based theory to design and build advanced mechanical systems.

- **16. Electrical Engineering**

- University of Limerick
- **455** points
- **Overview:** This programme of study will cover all the major components to allow you to become a successful Electrical Engineer. These include all the traditional topics such Electrical Machines, Electrical Power Systems, Power Electronics, Energy Management, Energy Storage and Electrical Automation. Given the increasingly important role of data in the generation and use of electricity it also includes much more modern topics such as Cybersecurity and Artificial Intelligence which are necessary to make electricity systems smarter and more secure. All of these topics build on foundational engineering modules which are taken in years 1 and 2 of the programme.
- **Why we recommended this:** Electrical Engineering leverages your analytical skills to tackle modern energy challenges, incorporating smart technologies like artificial intelligence to create more secure and efficient power systems.

- **17. Physics**

- University College Dublin
- **544** points
- **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
- **Why we recommended this:** Physics caters to your deep curiosity about the natural world, providing a rigorous analytical framework to study the fundamental laws governing matter, energy, and the universe.

- **18. Architecture**

- University College Dublin
- **555** points
- **Overview:** UCD Architecture is at the forefront of architectural and urban design, both in Ireland and internationally. Our degree attracts a diverse cross section of talents and approaches - from the technically minded to the artistically gifted; from the socially conscious to the natural communicators and leaders. All have the capacity to become successful and productive graduates in architecture. There are two main elements to the Architecture course - project work (architectural design, drawing and model making) and the lecture programmes (historical and theoretical material). Project work is taught in the architecture design studios through a combination of lectures, individual tuition, field trips, group tutorials, large reviews and exhibitions
- **Why we recommended this:** Architecture offers a unique blend of technical design and spatial problem-solving, allowing you to use your structured thinking to create functional, innovative, and aesthetically grounded buildings.

- **19. Biomedical, Health and Life Sciences**

- University College Dublin
- **589** points
- **Overview:** This course will appeal to those with a keen interest in science and in how research and technology can impact on human health. It is training scientists at the interface of science and medicine. You will learn how scientifically driven investigations can advance our knowledge of disease prevention, detection and treatment and translating these into clinical utility. The course will immerse you in modern medical and biological sciences and focus on the application of scientific developments. BHLS offers students a unique opportunity to complete a research project with a Principal Investigator in a biomedical research area that interests them and an opportunity to be involved in peer-reviewed publications.
- **Why we recommended this:** Biomedical, Health and Life Sciences suits your interest in scientific research, focusing on how technology can be used to advance medical detection and treat human diseases.

RECOMMENDATION SET 2

- **0. Education Art and Design**

- TUS Midwest
- **949** points
- **Overview:** This programme enables you to teach Art and Design at second level. It begins from the place of creative making in the studio setting where students are introduced to a variety of creative disciplines including: Fashion Design, Painting, Ceramics, Graphic Design, Sculpture, Animation & Motion Design, Printmaking and Contemporary Practice. Concurrent to this you will study educational theory and practice which will equip you with the teaching aptitudes and skills to enter into the profession of teaching Art and Design.
- **Why we recommended this:** Education Art and Design utilizes your practical skills to teach technical creative disciplines, applying your structured, inquiry-led thinking to studio-based learning and the complex study of educational theory.

- **1. Interior Design**

- TU Dublin - Grangegorman
- **862** points
- **Overview:** This course is all about the art or process of designing the interior decoration of a room or building, and how we experience spaces and the objects in them. It's a powerful, essential part of our daily lives that affects how we live, work and play. Exciting recreational environments, unique domestic spaces, functional workplaces, inspiring retail spaces, that's interior design at work.
- **Why we recommended this:** Interior Design focuses on the methodical and technical process of designing functional spaces, aligning with your interest in architecture and the logical planning required for built environments.

- **2. Game Art and Design**

- TUS Midwest

- **844** points
 - **Overview:** The B.Sc. (Honours) in Game Art & Design targets the creative needs of the games industry by producing graduates who can develop high quality game content, design game levels and work with industry leading content creation tools, scripting languages and game engines. The programme is designed to provide students with the knowledge and skills required to work in the games industry as games artists, content creators and designers. The programme embodies the multidisciplinary nature of the games sector and seeks to address the demand for game art and design skills both nationally and internationally.
 - **Why we recommended this:** Game Art and Design perfectly matches your passion for computers, blending high-level technical scripting and engine knowledge with the methodical creation of complex digital environments and interactive content.
- **3. Art and Design - Common Entry**
 - TUS Midwest
 - **837** points
 - **Overview:** The programmes at Limerick School of Art & Design (LSAD) aim to assist students to become confident, articulate, informed, creative and expressive practitioners, who will be capable of making significant contributions in their own particular fields of contemporary culture.
 - **Why we recommended this:** Art and Design - Common Entry allows you to explore various creative fields while applying a disciplined, inquiry-based approach to becoming a contemporary practitioner in the cultural sector.
- **4. Digital Animation**
 - TUS Midwest
 - **789** points
 - **Overview:** On this programme, students learn to design, create and animate for both 2D and 3D platforms such as TV, Film and Games. There is a focus on developing students' core skills in the traditional disciplines of drawing, illustration and animation asset design with a strong emphasis on the principles of animation. Building on this foundation, students continue to develop their creative voice while training in industry standard software, processes and technologies with the aim of bringing their ideas and concepts to life on screen. .
 - **Why we recommended this:** Digital Animation aligns with your high interest in computers, focusing on the technical software, asset design, and logical principles required to bring complex digital characters to life.
- **5. Medicine**
 - Trinity College Dublin
 - **739** points
 - **Overview:** Medicine is a unique course in that students study a broad range of subjects with the primary goal of understanding the science and practice of healing. Medicine and healthcare are constantly evolving as new knowledge and therapies emerge to prevent and treat illness. Each day brings a new patient with new healthcare challenges.
 - **Why we recommended this:** Medicine demands the rigorous analytical reasoning and deep scientific inquiry you excel at, focusing on the complex evidence-based practice of understanding and treating human health and illness.
- **6. Fine Art**
 - TU Dublin - Grangegorman
 - **701** points
 - **Overview:** The BA in Fine Art is designed for students who wish to work as cultural producers in the Fine Art sector. The course is focused primarily on acquiring the knowledge and skills that are needed to operate as a visual artist in a competitive environment, nationally and internationally. There's a strong emphasis on developing skills acquisition, creative intelligence and conceptual and critical thinking abilities, which are integrated with modules in Critical Theory and Professional Practice.
 - **Why we recommended this:** Fine Art rewards your strong analytical abilities by integrating critical theory and conceptual intelligence into the disciplined production of visual culture within a demanding and professional environment.
- **7. Visual Effects for Film, TV and Animation Portfolio**
 - TUS Midwest
 - **668** points
 - **Overview:** The BSc. in Visual Effects for Film, TV and Animation is designed to develop your artistic and technical abilities to produce world-class content from social media to the cinema screen. film, television, and animation sectors both nationally and internationally.
 - **Why we recommended this:** Visual Effects for Film, TV and Animation Portfolio leverages your computer expertise, using advanced technical tools and logical processes to create high-quality, world-class digital content for modern media.
- **8. Music Education**
 - Trinity College Dublin
 - **656** points
 - **Overview:** If you love sharing music, already have a competent standard of music performance, and wish to combine these qualities with a teaching career, then this course is ideally suited to you. Whether your interests are primarily academic or practical, your experience of this vast and rich discipline will be greatly advanced. As an academic study, music fosters independence of thought, creativity and critical and analytical skills. This course offers opportunities to perform music, to share music with others via teaching and performing, and to conduct a number of different ensembles.
 - **Why we recommended this:** Music Education combines your interest in sharing knowledge with the disciplined study of music theory, fostering the independent critical and analytical skills necessary for a successful teaching career.
- **9. Design - Visual Communication**
 - TU Dublin - Grangegorman
 - **654** points
 - **Overview:** The work of the Design - Visual Communication graduate is all about breathing life into images, text and concepts, turning them on their head and communicating them in a fresh way to a wide audience. This four-year course will suit you if you wish to become a graphic designer, illustrator, typographer or digital media designer.
 - **Why we recommended this:** Design - Visual Communication uses your computer interests to master digital media, requiring a logical approach to communicating complex concepts through fresh and effective visual mediums and typography.
- **10. Immersive Software Engineering**
 - University of Limerick
 - **651** points
 - **Overview:** Immersive Software Engineering is a new computer science degree where you learn by doing. You get an integrated Bachelors/Masters qualification (level 9) in four years. You spend half your time learning on campus in a research-driven paradigm, in studios, working on projects, in teams, undergoing continuous assessment instead of end of term exams. You spend the other half of your time in paid residencies, where you solve some of society's toughest problems in excellent companies. The goal of Immersive Software Engineering is to turn curious, creative people like you into top notch problem solvers and software engineers, familiar with concepts, methods and tools, and with about 2 years of experience gained in the

field in up to 5 companies.

- **Why we recommended this:** Immersive Software Engineering is an ideal match for your computer interest, focusing on intensive problem-solving and technical engineering skills within a high-speed, research-driven, and practical learning environment.

- **11. Dental Science**

- Trinity College Dublin
- **625 points**
- **Overview:** Dental Science is the study of the oral cavity and the diseases associated with oral tissues. This five-year programme is designed to ensure that graduates can safely and effectively deliver the full range of primary dental care, including prevention, diagnosis and treatment of oral and dental diseases.
- **Why we recommended this:** Dental Science suits your scientific interests and practical coordination, requiring a high level of technical precision and analytical depth for the diagnosis and treatment of oral health diseases.

- **12. Economics and Finance**

- University College Dublin
- **625 points**
- **Overview:** If you have a strong interest or ability in economics, maths and statistics, this degree provides everything you need for a future career in the areas of financial economics, banking and finance. Recognised as one of the premier degrees in its field in Ireland and internationally, it equips students with outstanding expertise in quantitative methods, analytical skills and a rigorous preparation in economics and finance. The skills that the course develops are valuable on their own in many careers and provide the essential background for learning Economics and Finance.
- **Why we recommended this:** Economics and Finance draws on your strong logical reasoning, offering a rigorous quantitative path focused on mathematical modelling, statistics, and the analytical complexities of global financial systems.

- **13. Management Science and Information Systems Studies**

- Trinity College Dublin
- **625 points**
- **Overview:** Students learn how to use techniques from disciplines such as business, mathematics, computer science, statistics and management science to solve real world problems. There is also a firm emphasis on interpersonal skills such as verbal communication, interviewing, teamwork and report writing.
- **Why we recommended this:** Management Science and Information Systems Studies utilizes your analytical strengths and computer interests to solve real-world problems using advanced mathematical techniques, statistics, and information technology.

- **14. Global Business (USA)**

- Dublin City University
- **617 points**
- **Overview:** Experience the world of work and study in the USA while you gain two business degrees, experience two countries and complete two work placements. The BA in Global Business (USA) is a passport to a career in international business. This unique course will give you a broad understanding of international business, as well as a rich intercultural experience, and high quality work placements with leading companies, in Ireland and the US.
- **Why we recommended this:** Global Business (USA) offers a structured, international perspective on commerce, requiring the analytical depth to understand complex global markets and the practical skills gained through high-quality work placements.

- **15. Actuarial & Financial Studies**

- University College Dublin
- **613 points**
- **Overview:** Studying UCD Actuarial & Financial Studies (BAFS) degree requires a multidisciplinary education in fields such as mathematics, economics, finance, statistics, risk management and professionalism. It takes a combination of strong analytical skills, business knowledge and understanding of human behaviour to design and manage programmes that control risk and guarantee sufficient funds for the insurance and pension sectors. Actuaries have traditionally worked mostly in the insurance and pensions industries but are increasingly moving into wider fields, where they can employ their range of skills. The course also opens up options to work in finance, investment and trading.
- **Why we recommended this:** Actuarial & Financial Studies matches your analytical profile perfectly, demanding elite mathematical and statistical skills to solve complex problems in risk management, insurance, and the broader financial sector.

- **16. Engineering with Management**

- Trinity College Dublin
- **613 points**
- **Overview:** Engineering with Management is concerned with the analysis, design, improvement, installation, and management of integrated systems of people, finance, materials and equipment. Our graduates have the technical skills common to all excellent engineers, with this knowledge augmented by an understanding of the commercial and industrial environment and the ability to generate innovative solutions to the problems of the world.
- **Why we recommended this:** Engineering with Management bridges your technical interests, requiring a logical approach to analyzing and improving complex industrial systems through innovative problem-solving and a deep understanding of commercial environments.

- **17. Law/Business Studies**

- Trinity College Dublin
- **613 points**
- **Overview:** LawThe law degree will appeal to you if you are interested in society and how it works, how we regulate the relationships between people. Given the wide range of legal modules, the degree attracts students with a broad range of interests. Business StudiesThis four year programme offers the opportunity to focus upon the many areas of overlapping interest between the two disciplines, for example, the structure of companies and other forms of business organisation, competition law and regulation of markets, consumer law, labour law, finance and financial markets, taxation, the protection of intellectual property and international perspectives on law and business.
- **Why we recommended this:** Law/Business Studies appeals to your intellectual curiosity, requiring a disciplined approach to understanding complex regulations and the logical frameworks that govern corporate structures, competition law, and international markets.

- **18. Law/History**

- Trinity College Dublin
- **613 points**
- **Overview:** Law The law degree will appeal to you if you are interested in society and how it works, how we regulate the relationships between people. Given the wide range of legal modules, the degree attracts students with a broad range of interests. Those interested in politics are attracted to subjects such as constitutional law. History The History programme introduces students to the diversity of historical studies, which include modules covering medieval and modern periods, including Irish, European, and American history, as well as some modules exploring the skills and methods which historians use, and the kinds of debates in which historians engage.
- **Why we recommended this:** Law/History utilizes your high capacity for research and critical inquiry, challenging you to examine complex societal

regulations and historical methods through a methodical, logical, and evidence-based lens.

- **19. Mathematics/Modern Language**

- Trinity College Dublin
- **613** points
- **Overview:** Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques. You can choose between German, Irish, Italian, Russian and Spanish. Apart from French and Irish all languages can be studied from both advanced and beginners level.
- **Why we recommended this:** Mathematics/Modern Language leverages your exceptional logical reasoning and problem-solving skills, combining the analytical rigor of advanced mathematics with the structured, systematic study of a new linguistic system.
