

RECOMMENDATION SET 1

- **0. Engineering**

- Trinity College Dublin
- **577** points
- **Overview:** Engineering is about being creative in technical problem solving. Engineers make things possible by using mathematical and scientific principles together with analytical and design skills. They tackle existing problems by developing new solutions through innovative technologies. They also expand the frontiers of society by developing advanced materials, sustainable energy systems, construction technologies, transport systems, biomedical devices, and telecommunications infrastructure.
- **Why we recommended this:**

- **1. Mechanical Engineering**

- University of Galway
- **566** points
- **Overview:** Mechanical Engineering is a subject concerned with the design and manufacture of parts and systems that make up the range of machinery and equipment you see around you, from a can opener to a jet aircraft. Mechanical engineers design the tools and processes necessary to create all man-made products, and are often involved from conceiving of an idea right through to seeing it as a finished product ready for its commercial application.
- **Why we recommended this:**

- **2. Engineering (Electrical & Electronic Engineering)**

- University College Cork
- **543** points
- **Overview:** BE Electrical and Electronic Engineering is a four-year professional engineering course designed to prepare students for employment in the electrical and electronic sectors in Ireland and abroad. It has a broad curriculum with strong practical content, including a work placement. It has an excellent record for graduate employment.
- **Why we recommended this:**

- **3. Mechanical & Manufacturing Engineering**

- Dublin City University
- **542** points

- **Overview:** Can you imagine designing and building a better electric vehicle, jet engine or wind turbine? Maybe you've figured out a way to improve inhalers or door handles. If you're fascinated by how things work and are made, enjoy getting caught up in the details, and thrive as part of a team, choose Mechanical and Manufacturing Engineering. Our students take things apart, figure out how they work and how to fix or improve them, then put them back together again. You'll get to use 3D printers and other advanced tools in DCU's state-of-the-art labs, while also absorbing engineering theory. It is at heart a maths-based course, but you'll also gain extensive skills and knowledge in engineering mechanics, computer simulation and analysis, design and manufacture, and project management. In third year, you'll do an eight-month work placement in industry and you also have the opportunity to study abroad. And you can extend your undergraduate BEng programme by a year to complete a masters degree.
- **Why we recommended this:**

- **4. Civil Engineering**

- University of Galway
- **521** points
- **Overview:** Civil Engineering is concerned with the planning, design, construction and maintenance of the built environment. It encompasses minor and major structures, ranging from drainage systems, houses, commercial buildings, roads and bridges to multi-story buildings and water and wastewater treatment facilities. The work of civil engineers is most visible in the structures in which we live and work.
- **Why we recommended this:**

- **5. Computer Science**

- University College Dublin
- **540** points
- **Overview:** The UCD Computer Science degree covers the fundamentals of Computer Science while also exposing students to the contemporary languages and technologies used in the industry. Key topics include programming, foundational mathematics, advanced software engineering, cloud development, theory of computer science, networks and security. The principal programming languages used are C, Java and Python. Specialised topics include computer graphics, game development, robotics, mobile development and others.
- **Why we recommended this:**

- **6. Computer Science and Information Technology**

- University of Galway
- **440** points
- **Overview:** We depend on electronic devices, such as computers and mobile phones, computer software and networks to store, process, transmit, retrieve and manipulate

information. Students will cover the technology used in these devices and will focus on the development of the software applications that make these devices useful.

- **Why we recommended this:**

- **7. Mechatronic Engineering**

- Dublin City University
- **533** points
- **Overview:** This course all about how we build intelligent machines through the meeting of mechanical systems such as engines and machines with the electronics needed to control them. This course perfectly blends mechanical engineering and electronic engineering. It offers classes in 3D modelling and design, for example, as well as circuit design and programming. Our students and staff are intrigued and inspired by the interplay between electronics and moving parts in connected devices and state-of-the-art machinery. Gain knowledge for the real world In third year, you'll get to do a six-month INTRA work placement and throughout the course, you'll do lots of project-based learning where you use the latest real-world tools and technologies to solve problems and, of course, build robots. That's not all. You'll also take some business-based modules, so you can learn how to develop a business plan and work with other parts of an enterprise. While you can go on from this course to work in either mechanical or electronic engineering, our graduates typically end up in roles where they incorporate one into the other. For example, they might put sensors into a machine to measure aspects of how it's working or develop control systems for a lift or a car. Either way, mechatronics graduates are in huge demand.
- **Why we recommended this:**

- **8. Electronic and Computer Engineering**

- Dublin City University
- **531** points
- **Overview:** Calling maths lovers! If you'd like to be able to fix a gaming remote or build a smart doorbell from scratch, you need to study Electronic and Computer Engineering. Across the first three years, you'll study the fundamentals of electronic engineering and programming. As this course covers a broad field, you'll choose one of four specialisms in fourth year: Systems and Devices (covering sensors, diagnostics and more), High-Speed Networks (such as fibre optics and 5G), Digital Interaction (including 3D interfaces and game design), and the Internet of Things.
- **Why we recommended this:**

- **9. Physics**

- University College Dublin
- **544** points
- **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also

possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.

- **Why we recommended this:**

- **10. Physics and Astrophysics**

- University College Cork
- **543** points
- **Overview:** Fundamentally Physics and Astrophysics is concerned with the study of the universe, from the largest galaxies to the nature of matter itself. Physics, and the technologies developed by physicists, play a major role in chemistry, biology, medicine, electronics, geology, and in the applied fields of optics, nanotechnology, computer science and engineering.
- **Why we recommended this:**

- **11. Physics with Astronomy**

- Dublin City University
- **413** points
- **Overview:** Do you enjoy maths and have a keen interest in how the universe works? This course is ideal for you. It's all about how physics can help to answer the puzzles of the universe. Astronomy is the oldest of the sciences, but you'll discover how it's evolving incredibly quickly in the 21st century, with more and more sensitive instruments yielding more and better data. By the time you graduate, you'll know the latest techniques used to observe the sky at different energies, and why multi-wavelength observations are crucial to understanding the true nature of cosmic sources. You'll learn through lectures and by doing lab work, where you'll get to explore the nature of sources using real X-ray data collected by the XMM-Newton observatory.
- **Why we recommended this:**

- **12. Biological, Biomedical & Biomolecular Sciences**

- University College Dublin
- **544** points
- **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
- **Why we recommended this:**

- **13. Sustainability**

- University College Dublin
- **532** points
- **Overview:** Sustainability is the great challenge of our time. It is enshrined in the Sustainable Development Goals and achieving it will require an integrated approach to the protection of the Earth and its inhabitants. This programme combines the economic, environmental and social dimensions of sustainability, enabling specialisation in one of those dimensions complemented by knowledge and skills from the others. Core modules provide a global perspective on sustainability and include interdisciplinary research, a professional placement, field work in Ireland and Europe and guest lectures from leading researchers, advocates and practitioners.
- **Why we recommended this:**

- **14. Earth and Environmental Sciences**

- University College Dublin
- **544** points
- **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
- **Why we recommended this:**

- **15. Engineering (Civil Structural & Environmental Engineering)**

- University College Cork
- **543** points
- **Overview:** Civil, Structural and Environmental engineers design, construct and operate a wide range of environmental infrastructure, vital to the needs of a modern economy. All the infrastructure around us, including roads, bridges, hospitals, universities, airports water, wastewater and energy facilities is the product of civil, structural and environmental engineering. Civil, Structural and Environmental engineering is the application of science to planning, design, and construction for the benefit of society while minimising environmental impact.
- **Why we recommended this:**

- **16. Mechanical and Sustainability Engineering**

- Dublin City University
- **533** points

- **Overview:** Transitioning to zero carbon is one of the biggest challenges faced by humanity. Students who do this innovative programme will be ready to tackle the huge challenges thrown up by climate change, while also being mindful of the environmental impact of any engineering work they do. This programme merges practical engineering with theory. It provides rigorous engineering training and will be accredited by Engineers Ireland, but it also encompasses extensive learning around climate and sustainability issues. If you care deeply about the environment, but would also like to finish university as a mechanical engineer with additional skills in sustainability, this is the perfect course for you.
- **Why we recommended this:**

- **17. Medicine**

- University College Cork
- **730** points
- **Overview:** The Medicine curriculum at UCC is rooted in the basic Medical Sciences of Anatomy, Physiology, and Biochemistry, but also places emphasis on clinical instruction. A distinctive feature is small-group, patient-centred teaching, in which students learn the skills of listening and communicating, history-taking and clinical examination.
- **Why we recommended this:**

- **18. Veterinary Medicine**

- University College Dublin
- **589** points
- **Overview:** This course will educate you to the best international standards in veterinary medicine and is accredited nationally by the Veterinary Council of Ireland (VCI), by the European Association of Establishments for Veterinary Education (EAEVE) and is one of only 6 veterinary schools in Europe currently accredited by the American Veterinary Medical Association (AVMA). The veterinary profession is concerned with the promotion of the health and welfare of animals of special importance to society. This involves the care of healthy and sick animals, the prevention, recognition, control and treatment of their diseases and of diseases transmitted from animals to man, and the welfare and productivity of livestock.
- **Why we recommended this:**

- **19. Occupational Therapy**

- University College Cork
- **566** points
- **Overview:** Students on this broad and varied Occupational Therapy course study psychology, anatomy and physiology, as well as occupational therapy theories, assessment and treatment approaches and evidence-based practice.
- **Why we recommended this:**

RECOMMENDATION SET 2

- **0. Art**

- ATU Galway / Mayo
- **919** points
- **Overview:** The BA (Hons) in Art is a dynamic, visually-driven programme. Students are challenged to address traditional, contemporary, conceptual, conventional, and experimental approaches to thinking, making, performing, and writing about art in today's world. Skills are delivered in Ceramics, Sculpture, Digital Media, Drawing, Film making, Painting, Photography, Printmaking, Professional Practice and Curation in tandem with academic research and writing skills in Art History and Critical Theory.
- **Why we recommended this:**

- **1. Interior Design**

- TU Dublin - Grangegorman
- **862** points
- **Overview:** This course is all about the art or process of designing the interior decoration of a room or building, and how we experience spaces and the objects in them. It's a powerful, essential part of our daily lives that affects how we live, work and play. Exciting recreational environments, unique domestic spaces, functional workplaces, inspiring retail spaces, that's interior design at work.
- **Why we recommended this:**

- **2. Medicine**

- Trinity College Dublin
- **739** points
- **Overview:** Medicine is a unique course in that students study a broad range of subjects with the primary goal of understanding the science and practice of healing. Medicine and healthcare are constantly evolving as new knowledge and therapies emerge to prevent and treat illness. Each day brings a new patient with new healthcare challenges.
- **Why we recommended this:**

- **3. Fine Art**

- TU Dublin - Grangegorman
- **701** points
- **Overview:** The BA in Fine Art is designed for students who wish to work as cultural producers in the Fine Art sector. The course is focused primarily on acquiring the knowledge and skills that are needed to operate as a visual artist in a competitive

environment, nationally and internationally. There's a strong emphasis on developing skills acquisition, creative intelligence and conceptual and critical thinking abilities, which are integrated with modules in Critical Theory and Professional Practice.

- **Why we recommended this:**

- **4. Music Education**

- Trinity College Dublin
- **656** points
- **Overview:** If you love sharing music, already have a competent standard of music performance, and wish to combine these qualities with a teaching career, then this course is ideally suited to you. Whether your interests are primarily academic or practical, your experience of this vast and rich discipline will be greatly advanced. As an academic study, music fosters independence of thought, creativity and critical and analytical skills. This course offers opportunities to perform music, to share music with others via teaching and performing, and to conduct a number of different ensembles.
- **Why we recommended this:**

- **5. Design - Visual Communication**

- TU Dublin - Grangegorman
- **654** points
- **Overview:** The work of the Design - Visual Communication graduate is all about breathing life into images, text and concepts, turning them on their head and communicating them in a fresh way to a wide audience. This four-year course will suit you if you wish to become a graphic designer, illustrator, typographer or digital media designer.
- **Why we recommended this:**

- **6. Architecture**

- TU Dublin - Bolton Street
- **632** points
- **Overview:** Architecture is the art and science of designing space. This course will suit you if you've got a creative aptitude for architectural design, the ability to implement your designs in practice, are interested in artistic and cultural aspects of society, and have an aptitude for technical and managerial challenges.
- **Why we recommended this:**

- **7. Illustration**

- National College of Art and Design
- **625** points
- **Overview:** In a culturally-rich and dynamic environment, students will be encouraged to develop their image-making skills and problem-solving abilities throughout the programme;

whilst constantly being challenged to create original work that is strong in content and aesthetically engaging. Thorough research is an on-going necessity so that students will be able to respond to diverse and demanding project briefs, guided by enthusiastic and experienced staff.

- **Why we recommended this:**

- **8. Fashion Design**

- National College of Art and Design
- **604** points
- **Overview:** Fashion Design aims to educate students to become professional practitioners in the field of fashion and related industries. Students are encouraged to have an awareness of fashion in its social and cultural context and to bring that understanding to their work. The department places great value on its industry and professional links that gives students an insight into real-world commercial requirements. Emphasis is placed on developing informed, creative designers, who are prepared for the needs of industry.
- **Why we recommended this:**

- **9. Education and Art or Design (Second Level Teaching)**

- National College of Art and Design
- **600** points
- **Overview:** Do you like to solve problems and to think 'outside the box'? If so, a career as an art teacher might be just the right choice for you. The BA in Education and Design or Education and Fine Art is a Joint Honours award. That means you follow the full degree course in Fine Art or Design as well as taking a dedicated teacher education programme as a professional qualification. This Joint Honours course takes four years to complete, as compared to the three-year single discipline Fine Art or Design degree.
- **Why we recommended this:**

- **10. Veterinary Medicine**

- University College Dublin
- **589** points
- **Overview:** This course will educate you to the best international standards in veterinary medicine and is accredited nationally by the Veterinary Council of Ireland (VCI), by the European Association of Establishments for Veterinary Education (EAEVE) and is one of only 6 veterinary schools in Europe currently accredited by the American Veterinary Medical Association (AVMA). The veterinary profession is concerned with the promotion of the health and welfare of animals of special importance to society. This involves the care of healthy and sick animals, the prevention, recognition, control and treatment of their diseases and of diseases transmitted from animals to man, and the welfare and productivity of livestock.
- **Why we recommended this:**

- **11. Commercial Modern Music**

- TU Dublin – Grangegorman
- **585** points
- **Overview:** This four-year course has been designed for guitarists, bass players, drummers, vocalists, songwriters, music producers and those running commercial music projects who want to gain a Level 8 qualification in modern music, while at the same time fulfilling their creative and commercial potential. It will encourage you to hone your live performance skills and recording studio technical knowledge while also developing your career goals, which may include being a professional performer, professional songwriter or producer, music manager or publisher, academic researcher or teacher.
- **Why we recommended this:**

- **12. Dental Hygiene**

- Trinity College Dublin
- **578** points
- **Overview:** This two-year course is based in the Dublin Dental University Hospital at Trinity. It has academic, project-based and clinical components which are carried out in the Dublin Dental University Hospital, Health Services Executive and general hospital settings. Emphasis is on health promotion projects, evidence-based learning, and clinical practice. You will be integrated with undergraduate dental science students and dental nursing students for some elements of the programme.
- **Why we recommended this:**

- **13. Engineering**

- Trinity College Dublin
- **577** points
- **Overview:** Engineering is about being creative in technical problem solving. Engineers make things possible by using mathematical and scientific principles together with analytical and design skills. They tackle existing problems by developing new solutions through innovative technologies. They also expand the frontiers of society by developing advanced materials, sustainable energy systems, construction technologies, transport systems, biomedical devices, and telecommunications infrastructure.
- **Why we recommended this:**

- **14. Finance**

- University College Cork
- **577** points
- **Overview:** Finance is concerned with the operation of financial markets and the valuation of financial assets, in particular in stock, bond, foreign exchange and interest rate markets. The BSc Finance is based equally on the subject areas of corporate finance and financial

economics. This combined approach provides graduates with a thorough grounding in each area.

- **Why we recommended this:**

- **15. Mathematical Sciences**

- University College Cork
- **577** points
- **Overview:** Mathematical Sciences, both as a language and as a body of knowledge and technique, have provided the fundamental underpinnings of science and technology for centuries. Today, its influence stretches beyond the physical sciences and engineering into medicine, business and finance, the life sciences, and the social sciences. Mathematical Sciences are also studied for the elegance of their ideas and the intellectual challenges they pose.
- **Why we recommended this:**

- **16. Physiotherapy**

- Trinity College Dublin
- **577** points
- **Overview:** Physiotherapy (also known as physical therapy) places full and functional movement at the heart of what it means to be healthy. It involves treating patients of all ages with a range of illnesses and conditions, including those with back and neck problems, sports injuries, arthritis, or those recovering from strokes and operations. The focus of our treatment is exercise prescription.
- **Why we recommended this:**

- **17. Psychology**

- Trinity College Dublin
- **577** points
- **Overview:** The School of Psychology aims to offer a knowledge base and a set of skills that not only equip students for the many careers that exist in psychology, but also prepare students intellectually for other careers. Psychology is a branch of science that demands clear, rigorous thinking, numeracy and the ability to define, study and solve problems in complex, changing settings.
- **Why we recommended this:**

- **18. Visual Merchandising & Display**

- TU Dublin - Grangegorman
- **573** points
- **Overview:** Visual merchandising is the practice in the retail industry of developing floor plans and three-dimensional displays to maximise sales. You'll develop mastery in the theory

and strategies of visual merchandising, practical competence in the skills needed for retail display, and an understanding of brand image and consumer behaviour and be able to operate at a high level in the retail industry.

- **Why we recommended this:**

- **19. Biomedical Engineering**

- University of Galway
- **568** points
- **Overview:** Biomedical Engineering is a relatively new branch of engineering that involves the use of cutting-edge technologies to help improve human healthcare. Biomedical engineers are involved in the design and creation of medical devices, implants such as stents, instruments and materials for clinical use.
- **Why we recommended this:**
