

RECOMMENDATION SET 1

- **0. Immersive Software Engineering**

- University of Limerick
- **651** points
- **Overview:** Immersive Software Engineering is a new computer science degree where you learn by doing. You get an integrated Bachelors/Masters qualification (level 9) in four years. You spend half your time learning on campus in a research-driven paradigm, in studios, working on projects, in teams, undergoing continuous assessment instead of end of term exams. You spend the other half of your time in paid residencies, where you solve some of society's toughest problems in excellent companies. The goal of Immersive Software Engineering is to turn curious, creative people like you into top notch problem solvers and software engineers, familiar with concepts, methods and tools, and with about 2 years of experience gained in the field in up to 5 companies.
- **Why we recommended this:** Immersive Software Engineering matches your passion for computers and hands-on learning, allowing you to solve complex technical problems through intensive software design and real-world industrial residencies.

- **1. Computer Science**

- University College Dublin
- **540** points
- **Overview:** The UCD Computer Science degree covers the fundamentals of Computer Science while also exposing students to the contemporary languages and technologies used in the industry. Key topics include programming, foundational mathematics, advanced software engineering, cloud development, theory of computer science, networks and security. The principal programming languages used are C, Java and Python. Specialised topics include computer graphics, game development, robotics, mobile development and others.
- **Why we recommended this:** Your strong analytical mindset and fascination with technology make Computer Science an ideal fit, focusing on programming, foundational mathematics, and the development of innovative software systems.

- **2. Artificial Intelligence and Machine Learning**

- University of Limerick
- **487** points
- **Overview:** The Bachelor of Science programme is of four years duration. In the first year the student will undertake an intensive learning programme of computer science fundamentals, programming including an immediate introduction to an AI-appropriate language, and mathematics. In subsequent years the focus on artificial intelligence will intensify while also including core computer science aspects such as operating systems, data structures and algorithms, database systems, computer graphics. Data analytics / mining and more specialist topics such as language engineering / translation and cultural aspects of AI are covered in later years. Students who opt to exit after four years with a bachelors degree will complete, in their final year, a year-long Final year Project that is the culmination of their studies drawing on their skills in research, algorithm or system design, and implementation.
- **Why we recommended this:** With your preference for deep logical analysis and computing, Artificial Intelligence and Machine Learning provides the perfect platform to explore complex algorithms and advanced system design.

- **3. Mechatronics Engineering**

- Dublin City University
- **533** points
- **Overview:** This course all about how we build intelligent machines through the meeting of mechanical systems such as engines and machines with the electronics needed to control them. This course perfectly blends mechanical engineering and electronic engineering. It offers classes in 3D modelling and design, for example, as well as circuit design and programming. Our students and staff are intrigued and inspired by the interplay between electronics and moving parts in connected devices and state-of-the-art machinery. Gain knowledge for the real world. In third year, you'll get to do a six-month INTRA work placement and throughout the course, you'll do lots of project-based learning where you use the latest real-world tools and technologies to solve problems and, of course, build robots. That's not all. You'll also take some business-based modules, so you can learn how to develop a business plan and work with other parts of an enterprise. While you can go on from this course to work in either mechanical or electronic engineering, our graduates typically end up in roles where they incorporate one into the other. For example, they might put sensors into a machine to measure aspects of how it's working or develop control systems for a lift or a car. Either way, mechatronics graduates are in huge demand.
- **Why we recommended this:** Your talent for technical problem-solving and interest in mechanics aligns with Mechatronics Engineering, where you will integrate electronic control systems with physical machinery and robotics.

- **4. Electronic and Computer Engineering**

- Dublin City University
- **531** points
- **Overview:** Calling maths lovers! If you'd like to be able to fix a gaming remote or build a smart doorbell from scratch, you need to study Electronic and Computer Engineering. Across the first three years, you'll study the fundamentals of electronic engineering and programming. As this course covers a broad field, you'll choose one of four specialisms in fourth year: Systems and Devices (covering sensors, diagnostics and more), High-Speed Networks (such as fibre optics and 5G), Digital Interaction (including 3D interfaces and game design), and the Internet of Things.
- **Why we recommended this:** Electronic and Computer Engineering suits your interest in both hardware and software, offering paths in high-speed networks and digital interaction for a technically minded problem-solver like you.

- **5. Aeronautical Engineering**

- University of Limerick
- **556** points
- **Overview:** The Bachelor of Engineering (B.E.) and Masters of Engineering (M.E.) programmes are 4 years and 5 years in duration, respectively. Both include an eight month period of Cooperative Education spent in an appropriate industrial environment. The course provides a broad and practical programme of study, which gives you a good understanding of aircraft design, aerodynamics, structures, propulsion, control, materials, avionics, business and maintenance, and enables you to work in all sectors of the aerospace industry.
- **Why we recommended this:** Your interest in how things work and your analytical skills make Aeronautical Engineering a great choice for exploring aircraft design, aerodynamics, and advanced structural materials.

- **6. Common Entry into Engineering (Undenominated Entry)**

- Dublin City University
- **543** points
- **Overview:** Engineers can be found in many fields from high-tech industry and medicine to financial services, energy aware technologies and biotechnology. If unsure of which strand of engineering is for you this course helps you to choose while studying the fundamentals of engineering. You'll spend first year building a strong engineering foundation across maths, materials engineering and basic sciences, while also building skills like logical and critical thinking. Then you'll specialise in second year, going on to a challenging, cutting-edge course where you'll build real expertise, whether that's in mechatronics or sustainability engineering. Through lectures, labs, individual and group work, you'll get hands-on experience with modern manufacturing processes, design, simulation and analysis procedures, and get skilled in programming and electronics.

- **Why we recommended this:** This broad foundation in Common Entry into Engineering (Undenominated Entry) allows you to apply your mathematical and scientific strengths across various disciplines before specialising in a technical field.
- **7. Engineering (Electrical & Electronic Engineering)**
 - University College Cork
 - **543 points**
 - **Overview:** BE Electrical and Electronic Engineering is a four-year professional engineering course designed to prepare students for employment in the electrical and electronic sectors in Ireland and abroad. It has a broad curriculum with strong practical content, including a work placement. It has an excellent record for graduate employment.
 - **Why we recommended this:** Engineering (Electrical & Electronic Engineering) matches your high technical aptitude, preparing you for a professional career designing complex electrical systems and innovative electronic technologies.
 - **8. Mechanical & Manufacturing Engineering**
 - Dublin City University
 - **542 points**
 - **Overview:** Can you imagine designing and building a better electric vehicle, jet engine or wind turbine? Maybe you've figured out a way to improve inhalers or door handles. If you're fascinated by how things work and are made, enjoy getting caught up in the details, and thrive as part of a team, choose Mechanical and Manufacturing Engineering. Our students take things apart, figure out how they work and how to fix or improve them, then put them back together again. You'll get to use 3D printers and other advanced tools in DCU's state-of-the-art labs, while also absorbing engineering theory. It is at heart a maths-based course, but you'll also gain extensive skills and knowledge in engineering mechanics, computer simulation and analysis, design and manufacture, and project management. In third year, you'll do an eight-month work placement in industry and you also have the opportunity to study abroad. And you can extend your undergraduate BEng programme by a year to complete a masters degree.
 - **Why we recommended this:** Your practical nature and love for understanding machinery make Mechanical & Manufacturing Engineering ideal for learning to design, build, and improve complex mechanical systems and vehicles.
 - **9. Biological and Biomedical Sciences**
 - Trinity College Dublin
 - **554 points**
 - **Overview:** Biology is the study of living things; we explore how life first arose: the properties that distinguish living organisms from inert matter; how the vast diversity of life forms was generated; how organisms reproduce themselves; how they interact both with each other and with the environment. Biology is fundamental to understanding the world we live in and plays a huge role in medicine.
 - **Why we recommended this:** Biological and Biomedical Sciences leverages your strong interest in life sciences, allowing you to use your analytical skills to explore the fundamental mechanisms of living organisms.
 - **10. Nutritional Sciences**
 - University College Cork
 - **518 points**
 - **Overview:** The BSc Nutritional Sciences course focuses on the role of diet in health promotion and disease prevention (including problems related to undernutrition and over-nutrition, and especially the major non communicable chronic diseases such as cardiovascular disease, cancer, diabetes and osteoporosis). This is done from an individual, national and international perspective, using insights gained from a wide range of scientific disciplines.
 - **Why we recommended this:** Nutritional Sciences offers a scientific approach to health, matching your investigative drive to understand the biological impact of diet on disease prevention and human wellness.
 - **11. Biological, Biomedical & Biomolecular Sciences**
 - University College Dublin
 - **544 points**
 - **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
 - **Why we recommended this:** Your interest in scientific exploration is well-served by Biological, Biomedical & Biomolecular Sciences, which provides a flexible path to specialise in advanced genetics, microbiology, or biochemistry.
 - **12. Biomedical Engineering**
 - Dublin City University
 - **544 points**
 - **Overview:** When you study Biomedical Engineering, you not only learn how the body works and becomes injured, but you come to understand how medical devices are developed to treat injuries and disease, and how we can help the body heal itself. You'll use state-of-the-art labs and tools such as 3D simulations and machine learning as you study. You'll get biological and medical knowledge, and technical engineering expertise, so you can solve problems in biomedicine. You'll study advanced biology, biomaterials, biomechanics, tissue engineering, medical device design, surgical technology, rehabilitation engineering and much more besides.
 - **Why we recommended this:** Biomedical Engineering combines your engineering interests with life sciences, focusing on developing medical devices and technologies to solve complex healthcare challenges through technical innovation.
 - **13. Physics**
 - University College Dublin
 - **544 points**
 - **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
 - **Why we recommended this:** Your high capacity for logical reasoning and interest in the physical world make Physics a perfect choice for exploring the fundamental laws governing matter and energy.
 - **14. Earth and Environmental Sciences**
 - University College Dublin
 - **544 points**
 - **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
 - **Why we recommended this:** Earth and Environmental Sciences suits your analytical curiosity, offering a scientific lens to study the planet's natural

systems and address critical environmental challenges.

- **15. Physics and Astrophysics**

- University College Cork
- **543** points
- **Overview:** Fundamentally Physics and Astrophysics is concerned with the study of the universe, from the largest galaxies to the nature of matter itself. Physics, and the technologies developed by physicists, play a major role in chemistry, biology, medicine, electronics, geology, and in the applied fields of optics, nanotechnology, computer science and engineering.
- **Why we recommended this:** Physics and Astrophysics aligns with your deep interest in the physical sciences, challenging you to apply mathematical rigor to understand the nature of the universe.

- **16. Physics with Biomedical Sciences**

- Dublin City University
- **413** points
- **Overview:** Are you a naturally curious person with analytical skills, perseverance, and a broad range of interests? If you love physics and are interested in understanding how it can be applied to biomedical sciences, this is the course for you. Physics with Biomedical Sciences overlays the principles that underpin the chemical, biological and life sciences on a solid physics background, while exposing you to the most recent biomedical developments. You'll learn through lectures and tutorials, and by working in our state-of-the-art laboratories. You'll also benefit from our small class sizes and learning from our award-winning teaching staff, who are also undertaking cutting-edge research. Practical experience to apply the theory. In third year, you'll get the chance to intern for an extended period in a hospital and experience the real medical environment.
- **Why we recommended this:** Physics with Biomedical Sciences bridges your interest in physical laws and life sciences, focusing on applying analytical physics principles to cutting-edge medical and biological developments.

- **17. Architecture**

- University College Dublin
- **555** points
- **Overview:** UCD Architecture is at the forefront of architectural and urban design, both in Ireland and internationally. Our degree attracts a diverse cross section of talents and approaches - from the technically minded to the artistically gifted; from the socially conscious to the natural communicators and leaders. All have the capacity to become successful and productive graduates in architecture. There are two main elements to the Architecture course - project work (architectural design, drawing and model making) and the lecture programmes (historical and theoretical material). Project work is taught in the architecture design studios through a combination of lectures, individual tuition, field trips, group tutorials, large reviews and exhibitions.
- **Why we recommended this:** Architecture perfectly balances your interest in construction and technical design, providing a creative yet structured environment to develop urban spaces and innovative building solutions.

- **18. Landscape Architecture**

- University College Dublin
- **485** points
- **Overview:** The design studio is central to Landscape Architecture. You'll spend most of your time in the studio, pursuing individual and small group project work. You'll learn by doing design projects that allow you to develop creative skills and apply knowledge taught through lectures, seminars, drawing classes, field trips, reviews, readings, individual and group tutorials. In your third year you will also gain professional experience interning in a landscape related company / institution.
- **Why we recommended this:** Landscape Architecture leverages your interest in construction and the environment, allowing you to use your design skills to create sustainable and functional outdoor spaces.

- **19. Graphics and Construction Technology with concurrent Teacher Education**

- University of Limerick
- **455** points
- **Overview:** This is a teacher education programme which aims to provide you with the opportunity to become a successful teacher of technology subjects at second level. These subjects include; Junior Certificate (Wood Technology, Graphics) and Leaving Certificate (Construction Studies, Design & Communication Graphics). The programme is four years in duration and includes a number of school based teaching practice placements. These include a six week placement in the spring semester of year two and a further ten week placement in autumn semester of year four. These placements are designed to provide you, the student teacher, with a genuine opportunity for professional development under the supervision of faculty members of the University.
- **Why we recommended this:** Graphics and Construction Technology with concurrent Teacher Education matches your practical construction interests, allowing you to master technical design and wood technology through a structured, hands-on curriculum.

RECOMMENDATION SET 2

- **0. Human Health and Disease**

- Trinity College Dublin
- **567** points
- **Overview:** The Human Health and Disease degree trains students for work in the field of biomedical research. It brings to life the fascinating connections between structure and function in the human body and explores the health and disease continuum in detail, including teaching on how medical therapies act to treat or even prevent disease. As an example, understanding brain structure and biochemistry allows us to appreciate how neurons communicate and this in turn is helping biomedical researchers and clinicians to identify new and effective ways to treat and prevent diseases such as dementia.
- **Why we recommended this:** Human Health and Disease aligns with your strong scientific curiosity and interest in life sciences, focusing on complex biological research and the technical mechanics of how diseases are treated.

- **1. Business and Law**

- University College Dublin
- **566** points
- **Overview:** The Business & Law (BBL) degree is a popular choice for many students and is extremely well regarded by employers across the legal and financial communities. The degree is a 'double major' which means it combines law and business in a single degree, providing an ideal skill-set for the commercial world and offering valuable career flexibility. If you choose this degree, you will undertake business and law modules in equal measure for your first three years in both the UCD Sutherland School of Law and the UCD Quinn School of Business. This allows you to gain a deep understanding of both disciplines while offering you the opportunity to choose in final year which area interests you most for your career progression.
- **Why we recommended this:** Business and Law utilizes your analytical mindset to navigate the commercial world, offering a structured, logical approach to solving complex problems within legal and financial systems.

- **2. Law (BCL)**

- University College Dublin
 - **566** points
 - **Overview:** The UCD Bachelor of Civil Law (BCL) degree enjoys a proud history and an established reputation at home and abroad. The BCL degree allows you to immerse yourself in the study of law, to engage with a range of interesting legal perspectives and to acquire a profound understanding of how law works in theory and in practice.
 - **Why we recommended this:** Law (BCL) suits your talent for logical reasoning and understanding complex systems, allowing you to explore how legal frameworks function in both theory and practice.
- **3. Law and Business**
 - University College Cork
 - **566** points
 - **Overview:** The BCL (Law and Business) is a joint honours degree combining the related disciplines of law and business. This exciting four-year programme: explores the relationship between law and business, in areas such as business organisation, finance, and market regulation, and applies key legal and business tools of analysis to examine issues affecting the performance of firms and industries in a global business environment.
 - **Why we recommended this:** Law and Business provides a rigorous analytical framework, challenging you to apply systematic tools of analysis to examine market regulations and the performance of global firms.
- **4. Law with Economics**
 - University College Dublin
 - **566** points
 - **Overview:** This course allows you to obtain a highly respected degree in law, whilst simultaneously acquiring a broad knowledge of economics. Certain areas of law (e.g. competition regulation and intellectual property) are heavily influenced by economic theory. BCL (Law with Economics) graduates are uniquely equipped to understand these regulatory frameworks in all of their conceptual complexity. On this degree, you'll embark on a field of cross-disciplinary study which is intellectually very demanding, but also tremendously enriching and of immense practical importance.
 - **Why we recommended this:** Law with Economics perfectly suits your preference for logical theory and problem-solving, as it applies economic analysis to understand and influence complex regulatory frameworks and intellectual property.
- **5. Law with French Law**
 - University College Dublin
 - **566** points
 - **Overview:** Law with French Law is one of two French Law Courses offered by Sutherland School of Law, the other being the dual degree - the BCL/Maîtrise (more information on the following page). All students interested in the French Law Courses enter the BCL (Law with French Law) in first year. Both degrees offer the exciting opportunity for immersion in two of the world's major legal systems. Student will learn about the common law system, practised in Ireland and the UK (and in some form, in most of the English-speaking world) and the civil law system which is used throughout Europe.
 - **Why we recommended this:** Law with French Law appeals to your interest in structured systems, allowing you to analytically compare and contrast two of the world's major legal structures and procedures.
- **6. Law with History**
 - University College Dublin
 - **566** points
 - **Overview:** There's a natural affinity between the disciplines of law and history. Each is shaped by the other. Important historical events are often interlinked with contemporary legal structures. Legal reform may be prompted by the defining events of the past. This course allows you to acquire a highly respected degree in law, whilst also pursuing a passion for history and acquiring a deeper understanding of past events that have shaped our current legal system.
 - **Why we recommended this:** Law with History allows you to use your research skills to examine how past events have logically shaped our current legal systems and contemporary societal structures.
- **7. Law with Irish**
 - University College Dublin
 - **566** points
 - **Overview:** The BCL (Law with Irish) course allows undergraduate law students to access a cohesive set of Irish language modules which are relevant to the study and practice of law. This programme offers you the opportunity to acquire a highly respected BCL degree, whilst additionally deepening your competence in the Irish language in the context of law. Your Irish language communication skills will be developed by the resources provided by a modern multi-media language laboratory (An Teanglann) and the advanced language skills training in Láirionad de Bhaldraithe.
 - **Why we recommended this:** Law with Irish combines technical legal training with advanced language skills, challenging your ability to master complex communication systems within a professional, highly respected framework.
- **8. Law with Philosophy**
 - University College Dublin
 - **566** points
 - **Overview:** Legal systems express and reflect the prevailing moral, political, social and economic philosophy of the State. Law and philosophy are, therefore, complementary fields of study. An understanding of law is fundamentally enhanced by a deeper knowledge of philosophical theory. This course offers you a highly respected degree in law, combined with an enriched appreciation of its philosophical underpinnings.
 - **Why we recommended this:** Law with Philosophy appeals to your deep analytical capabilities, exploring the logical and theoretical foundations that underpin legal systems and the moral philosophy of the State.
- **9. Law with Politics**
 - University College Dublin
 - **566** points
 - **Overview:** Law and politics are inextricably linked by the legislative process. This course allows you to obtain a highly respected law degree, whilst also acquiring a deeper understanding of political theory and the political process. Many UCD law graduates have progressed to political careers. Others have become high-profile political commentators.
 - **Why we recommended this:** Law with Politics allows you to use your systematic thinking to understand the legislative process and the complex theoretical frameworks that drive political change and commentary.
- **10. Law with Social Justice**
 - University College Dublin
 - **566** points
 - **Overview:** The BCL with Social Justice course, the first of its kind in Ireland, combines the study of Law with rigorous analysis of social injustice, its causes and remedies. It will appeal to students who are interested in issues of equality, diversity and disadvantage, and who want to look in-depth at

the social context in which law operates. On completion, you'll be uniquely equipped to offer a critical perspective on issues such as the adequacy of our criminal justice system, the legal treatment of women and minority groups, and the underlying causes of social and economic injustice.

- **Why we recommended this:** Law with Social Justice focuses on the rigorous analysis of societal structures, using your problem-solving skills to identify remedies for inequality and disadvantage within the legal system.

- **11. Occupational Therapy**

- University College Cork
- **566 points**
- **Overview:** Students on this broad and varied Occupational Therapy course study psychology, anatomy and physiology, as well as occupational therapy theories, assessment and treatment approaches and evidence-based practice.
- **Why we recommended this:** Occupational Therapy leverages your high interest in life sciences and anatomy, emphasizing evidence-based practice and the technical study of human physiology to improve patient outcomes.

- **12. Theoretical Physics**

- Trinity College Dublin
- **566 points**
- **Overview:** Theoretical Physics explores the natural world at its most fundamental level, using mathematical theories guided by experimental investigation. For some it is the foundation for an academic career in mathematics or physics. For others it provides the basis for many career options in industry, medicine, law, finance and computing. Trinity provides a course which ranges widely across physics and mathematics. Its graduates are in demand for their technical skills and versatility.
- **Why we recommended this:** Theoretical Physics is a perfect match for your exceptional logical reasoning and interest in physical sciences, allowing you to explore fundamental natural laws through rigorous mathematical analysis.

- **13. Business, Economics and Social Studies (BESS)**

- Trinity College Dublin
- **565 points**
- **Overview:** BESS is a uniquely flexible degree programme offering you different degree options across the disciplines of Business, Economics, Political Science and Sociology. It provides students with a broad education and you specialise and graduate with a Single Honours or Joint Honours degree with another subject, or a Major with a Minor. It also offers a high level of flexibility in two very important ways: from the second year onwards students are allowed to (a) choose the specific degree they wish to take and, (b) choose individual modules within their chosen degree path.
- **Why we recommended this:** Business, Economics and Social Studies (BESS) offers the flexibility to pursue highly analytical subjects like economics, matching your strength in solving complex problems and understanding how systems operate.

- **14. European Studies**

- Trinity College Dublin
- **564 points**
- **Overview:** European Studies is a broad-ranging and integrated programme that offers students the chance to learn European languages, and also to study history and social sciences. This programme encourages students to think about our continent in all its complexity, and to analyse Europe's cultures, history, and politics.
- **Why we recommended this:** European Studies utilizes your research abilities to analyze complex international systems, focusing on the history, cultures, and politics that logically shape our modern world.

- **15. Aeronautical Engineering**

- University of Limerick
- **556 points**
- **Overview:** The Bachelor of Engineering (B.E.) and Masters of Engineering (M.E.) programmes are 4 years and 5 years in duration, respectively. Both include an eight month period of Cooperative Education spent in an appropriate industrial environment. The course provides a broad and practical programme of study, which gives you a good understanding of aircraft design, aerodynamics, structures, propulsion, control, materials, avionics, business and maintenance, and enables you to work in all sectors of the aerospace industry.
- **Why we recommended this:** Aeronautical Engineering aligns with your technical skills and interest in engineering, focusing on the hands-on design, aerodynamics, and structural analysis required to work in the aerospace industry.

- **16. Business Studies and Spanish**

- Trinity College Dublin
- **556 points**
- **Overview:** This programme offers an exciting way of learning about business concepts, theories and models, in a variety of subject areas, as well as getting to grips in an in-depth and comprehensive manner with another country's language, its society, culture and business environment, the third year of which is spent studying abroad. This programme aims to provide you with the knowledge and skills necessary to communicate internationally and to understand the social, political and cultural contexts of markets, organisations and management across countries.
- **Why we recommended this:** Business Studies and Spanish challenges your analytical mind to master a new language while systematically exploring the cultural and management contexts of diverse international markets.

- **17. Architecture**

- University College Dublin
- **555 points**
- **Overview:** UCD Architecture is at the forefront of architectural and urban design, both in Ireland and internationally. Our degree attracts a diverse cross section of talents and approaches - from the technically minded to the artistically gifted; from the socially conscious to the natural communicators and leaders. All have the capacity to become successful and productive graduates in architecture. There are two main elements to the Architecture course - project work (architectural design, drawing and model making) and the lecture programmes (historical and theoretical material). Project work is taught in the architecture design studios through a combination of lectures, individual tuition, field trips, group tutorials, large reviews and exhibitions
- **Why we recommended this:** Architecture matches your interest in construction and design, combining technical drawing and model-making with the analytical study of urban environments and historical structures.

- **18. Biomedical Science**

- University College Cork
- **555 points**
- **Overview:** Biomedical Science is a continually changing dynamic profession and involves the study of diverse areas of medical science including biochemistry, microbiology, cellular pathology, haematology, and transfusion science. It provides training in cutting-edge technologies to facilitate the investigation of disease and medical research.
- **Why we recommended this:** Biomedical Science suits your high interest in life sciences and research, providing technical training in cutting-edge lab technologies to investigate diseases and facilitate medical breakthroughs.

- **19. Business Studies and French**

- 12. Business Studies and French

- Trinity College Dublin
- **555** points
- **Overview:** This four year programme offers an exciting way of learning about business concepts, theories and models, in a variety of subject areas, as well as getting to grips in an in-depth and comprehensive manner with another country's language, its society, culture and business environment.
- **Why we recommended this:** Business Studies and French allows you to apply systematic thinking to international business models while developing technical proficiency in a second language and understanding foreign business environments.
