

RECOMMENDATION SET 1

- **0. Post Primary Teacher Education - Technology, Engineering and Graphics**

- Dublin City University
- **402** points
- **Overview:** This is a course for people who are interested in becoming post-primary teachers in the areas of Technology, Engineering and Graphics. On this degree, you'll learn about designing and innovating, and in coming up with creative solutions for the challenges facing society and industry. The four-year programme will be delivered through a partnership of DCU and Technological University of the Shannon (TUS). The first two years of study will take place at the TUS Athlone campus, and the final two years at the DCU Institute of Education in Dublin.
- **Why we recommended this:** Post Primary Teacher Education - Technology, Engineering and Graphics bridges your passion for technical design with a desire to guide and educate others in practical, hands-on learning environments.

- **1. Physical Education with Biology**

- Dublin City University
- **521** points
- **Overview:** Do you really enjoy getting active while also having a passion for subjects such as biology and science? This course is a brilliant opportunity to blend your interests in a substantive way and go on to make a positive impact on society through education. Once you graduate, you can teach PE and Biology up to Leaving Cert level, and Science for Junior Cert level, or choose from a wide range of other exciting career paths. This course offers a unique blend of academic subjects, taught in a way that emphasises learning through practical experiences. During the course, you'll gain a comprehensive understanding of the content, theory, and skills of different physical activities (such as athletics, games, aquatics, dance, and outdoor activities), biology, science and education. You'll also improve your communication, leadership, and critical thinking skills. Future-proof your life In both third and fourth year, you'll do a comprehensive professional school placement and you can also choose to study overseas through the Erasmus programme.
- **Why we recommended this:** Physical Education with Biology combines your interests in physical activity and scientific inquiry, allowing you to improve lives through health education and the study of human biology.

- **2. Physical Education with Mathematics**

- Dublin City University

- **499** points
- **Overview:** Do you really enjoy both physical activity and mathematics? This course is a brilliant opportunity to combine your passions and go on to make a positive impact on society through education. Once you graduate from this course, you can teach these subjects up to Leaving Cert level or choose from a wide range of other exciting career paths. This course offers a unique blend of academic subjects, taught in a way that emphasises learning through practical experiences. During the course, you'll gain a comprehensive understanding of the content, theory, and skills of different physical activities (such as athletics, games, aquatics, dance, and outdoor activities), maths and education. You'll also improve your communication, leadership, and critical thinking skills.
- **Why we recommended this:** Physical Education with Mathematics perfectly blends your strong logical reasoning skills with your love for sports, preparing you for a rewarding career teaching both technical and physical disciplines.

- **3. Science and Mathematics Education**

- Dublin City University
- **443** points
- **Overview:** If you love science and maths, and would like to share your enthusiasm, interest and knowledge with young people, you'll thrive on the BSc in Science and Mathematics Education. Science and maths teachers work to develop their pupils' understanding of the world around them and to educate future generations of scientists, engineers and technologists, not to mention citizens who are scientifically, mathematically and technically literate. You'll build a strong foundation in key areas of education, mathematics and either physics or chemistry, developing essential mathematical thinking skills, and scientific practices and ways of working throughout the four years. You'll also study the history, psychology, sociology and philosophy of education, as well as undertaking curriculum studies.
- **Why we recommended this:** Science and Mathematics Education suits your analytical mind and helping nature, enabling you to share complex scientific knowledge and inspire the next generation of logical thinkers.

- **4. Engineering**

- Trinity College Dublin
- **577** points
- **Overview:** Engineering is about being creative in technical problem solving. Engineers make things possible by using mathematical and scientific principles together with analytical and design skills. They tackle existing problems by developing new solutions through innovative technologies. They also expand the frontiers of society by developing advanced materials, sustainable energy systems, construction technologies, transport systems, biomedical devices, and telecommunications infrastructure.

- **Why we recommended this:** Engineering leverages your exceptional problem-solving abilities and practical mindset, offering a career where you can use mathematical principles to design innovative, real-world solutions.

- **5. Mechanical Engineering**

- University of Galway
- **566** points
- **Overview:** Mechanical Engineering is a subject concerned with the design and manufacture of parts and systems that make up the range of machinery and equipment you see around you, from a can opener to a jet aircraft. Mechanical engineers design the tools and processes necessary to create all man-made products, and are often involved from conceiving of an idea right through to seeing it as a finished product ready for its commercial application.
- **Why we recommended this:** Mechanical Engineering matches your talent for understanding how things work, focusing on the design and manufacture of complex machinery through precise analytical and technical application.

- **6. Engineering (Electrical & Electronic Engineering)**

- University College Cork
- **543** points
- **Overview:** BE Electrical and Electronic Engineering is a four-year professional engineering course designed to prepare students for employment in the electrical and electronic sectors in Ireland and abroad. It has a broad curriculum with strong practical content, including a work placement. It has an excellent record for graduate employment.
- **Why we recommended this:** Engineering (Electrical & Electronic Engineering) provides a structured, technical path to master electrical systems, aligning with your high aptitude for practical problem-solving and structured, data-driven environments.

- **7. Mechanical & Manufacturing Engineering**

- Dublin City University
- **542** points
- **Overview:** Can you imagine designing and building a better electric vehicle, jet engine or wind turbine? Maybe you've figured out a way to improve inhalers or door handles. If you're fascinated by how things work and are made, enjoy getting caught up in the details, and thrive as part of a team, choose Mechanical and Manufacturing Engineering. Our students take things apart, figure out how they work and how to fix or improve them, then put them back together again. You'll get to use 3D printers and other advanced tools in DCU's state-of-the-art labs, while also absorbing engineering theory. It is at heart a maths-based course, but you'll also gain extensive skills and knowledge in engineering mechanics, computer simulation and analysis, design and manufacture, and project management. In third year, you'll do an eight-month work placement in industry and you also have the opportunity to

study abroad. And you can extend your undergraduate BEng programme by a year to complete a masters degree.

- **Why we recommended this:** Mechanical & Manufacturing Engineering appeals to your hands-on nature and interest in production processes, combining advanced mathematics with practical labs to create and improve modern technologies.

- **8. Medicine**

- University College Cork
- **730** points
- **Overview:** The Medicine curriculum at UCC is rooted in the basic Medical Sciences of Anatomy, Physiology, and Biochemistry, but also places emphasis on clinical instruction. A distinctive feature is small-group, patient-centred teaching, in which students learn the skills of listening and communicating, history-taking and clinical examination.
- **Why we recommended this:** Medicine offers the ideal combination of rigorous scientific investigation and compassionate care, perfectly matching your strengths in analytical thinking and helping people within the healthcare system.

- **9. Veterinary Medicine**

- University College Dublin
- **589** points
- **Overview:** This course will educate you to the best international standards in veterinary medicine and is accredited nationally by the Veterinary Council of Ireland (VCI), by the European Association of Establishments for Veterinary Education (EAEVE) and is one of only 6 veterinary schools in Europe currently accredited by the American Veterinary Medical Association (AVMA). The veterinary profession is concerned with the promotion of the health and welfare of animals of special importance to society. This involves the care of healthy and sick animals, the prevention, recognition, control and treatment of their diseases and of diseases transmitted from animals to man, and the welfare and productivity of livestock.
- **Why we recommended this:** Veterinary Medicine utilizes your scientific expertise and practical skills to promote animal welfare, blending complex medical diagnosis with the hands-on care required for various species.

- **10. Occupational Therapy**

- University College Cork
- **566** points
- **Overview:** Students on this broad and varied Occupational Therapy course study psychology, anatomy and physiology, as well as occupational therapy theories, assessment and treatment approaches and evidence-based practice.
- **Why we recommended this:** Occupational Therapy allows you to use your strong social skills and scientific knowledge to help people overcome physical challenges, focusing on practical solutions for improved daily living.

- **11. Children's and General Nursing (Integrated)**

- University College Cork
- **522** points
- **Overview:** The Children's and General Nursing course will provide you with opportunities to develop knowledge and skills relevant to children's and general nursing practice, including independent and critical thinking and problem-solving. It will enable you to ensure that the nursing care you deliver is up-to-date and based on the best current evidence.
- **Why we recommended this:** Children's and General Nursing (Integrated) aligns with your nurturing instincts and scientific interest, providing a stable, structured environment where you can provide critical care to diverse patient groups.

- **12. Government (Politics, Economics and Law)**

- University of Galway
- **412** points
- **Overview:** Government has a profound impact on our lives and the functioning of society. Government policies affect everything from our health and wellbeing, to the affordability of housing and transport, the quality of the environment and the viability of businesses and voluntary organisations. The BA Government (Politics, Economics and Law) will enable you to better understand public affairs and emerging critical issues and to develop the skills necessary to make a real difference in your chosen career path, whether in public, private or voluntary and non-profit sectors.
- **Why we recommended this:** Government (Politics, Economics and Law) fits your organised, analytical approach to society, allowing you to navigate complex systems and contribute to public affairs through structured legal and economic reasoning.

- **13. BCL (Law and Society)**

- Dublin City University
- **496** points
- **Overview:** The BCL degree focuses on experiential learning and developing practical legal skills while also providing you with opportunities to engage with industry and the wider legal profession. In particular, the Moot Court module gives you the chance to practise your court-room skills and gain a real insight into law in action. DCU has its own Moot Court room which is where you will participate in mock trials and practise skills such as advocacy, presenting evidence or cross examination.
- **Why we recommended this:** BCL (Law and Society) suits your logical mind and interest in justice, offering opportunities to develop practical advocacy skills and analyze the impact of legal frameworks on society.

- **14. International Relations**

- Dublin City University

- **411** points
- **Overview:** During this degree, you will learn about issues such as conflict, peace and security, intelligence, terrorism, globalisation, third-world debt and climate change. By the end of this unique and innovative course, you will have learned about international politics, development and regional studies from a global perspective to equip you for careers working with international organisations, institutions and NGOs.
- **Why we recommended this:** International Relations utilizes your interest in global structures and social systems, preparing you for a career managing complex diplomatic issues and working within highly organised international organisations.

- **15. Politics and International Relations (Social Sciences Two Subject Combination)**

- University College Dublin
- **490** points
- **Overview:** With a degree in Politics and International Relations, you will develop the knowledge and skills required to analyse the complex interplay between national and international political institutions, systems and forces. In first year, you will be introduced to the core areas of politics, giving you a solid foundation for future study. In subsequent years, you will pursue the areas of politics and international relations that interest you most.
- **Why we recommended this:** Politics and International Relations (Social Sciences Two Subject Combination) matches your analytical interest in power structures and social policy, developing your skills in evaluating complex national and international systems.

- **16. Engineering (Process and Chemical Engineering)**

- University College Cork
- **543** points
- **Overview:** The first year of the BE is a broad education in engineering fundamentals. Process and Chemical Engineers are involved in the design, modification and operation of processes to produce products across a broad range of process industries, including bio/pharmaceuticals, food and drinks production, bulk chemicals and fuels/energy. Process and Chemical engineering helps provide a pathway towards meeting societal requirements around health and well being, energy provision, food production, water supply, waste management and consumer goods.
- **Why we recommended this:** Engineering (Process and Chemical Engineering) combines your interest in chemical sciences with practical problem-solving, focusing on designing efficient systems for manufacturing essential products and managing resources.

- **17. Food Science**

- University College Dublin
- **466** points
- **Overview:** The Food Science Programme at UCD develops your scientific knowledge and practical skills in producing sustainable, high-quality, safe, and nutritious food for the global

market. As a food scientist, you will be involved in all aspects of the food chain, from production to the consumer. You will learn core sciences such as biology, chemistry, and mathematics, and apply them to food physics, analysis, microbiology, and sensory science. You will also gain expertise in food chemistry, processing, and new product development, preparing you for careers in production management, nutrition, food quality and safety, sales and marketing, and research. Applicants can pick one of two pathways: Food Science or Sustainable Food Systems

- **Why we recommended this:** Food Science leverages your scientific curiosity and practical mindset to explore the production of safe, nutritious food, applying biology and chemistry to solve global supply chain challenges.

- **18. Chemistry with Artificial Intelligence**

- Dublin City University
- **413** points
- **Overview:** During the course, you'll explore AI applications in chemistry using large datasets, powerful computing architectures and advanced learning algorithms. As you develop your understanding of how to apply AI techniques and technologies, you'll also learn from industry partners, who take an active role throughout the course.
- **Why we recommended this:** Chemistry with Artificial Intelligence perfectly bridges your high interest in chemical science and computing, allowing you to use advanced technology to solve complex scientific and data-driven problems.

- **19. Chemistry**

- University College Dublin
- **544** points
- **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
- **Why we recommended this:** Chemistry focuses on your deep interest in scientific investigation, providing a rigorous environment to explore the fundamental building blocks of the world through experimentation and analytical research.

RECOMMENDATION SET 2

- **0. Physiotherapy**

- University College Dublin

- **578** points
- **Overview:** Physiotherapists are healthcare professionals responsible for developing, maintaining and restoring movement and functional ability in adults and children using evidence-based practice. Studying Physiotherapy in UCD will provide you with the skills and qualifications required to practice as a physiotherapist upon graduation. With state-of-the-art facilities and globally recognised researchers as lecturers, you will learn in a culture of established academic excellence.
- **Why we recommended this:** Physiotherapy capitalizes on your practical skills and interest in sports and health, focusing on restoring movement and helping others through evidence-based clinical practice.

- **1. Veterinary Medicine**

- University College Dublin
- **589** points
- **Overview:** This course will educate you to the best international standards in veterinary medicine and is accredited nationally by the Veterinary Council of Ireland (VCI), by the European Association of Establishments for Veterinary Education (EAEVE) and is one of only 6 veterinary schools in Europe currently accredited by the American Veterinary Medical Association (AVMA). The veterinary profession is concerned with the promotion of the health and welfare of animals of special importance to society. This involves the care of healthy and sick animals, the prevention, recognition, control and treatment of their diseases and of diseases transmitted from animals to man, and the welfare and productivity of livestock.
- **Why we recommended this:** Veterinary Medicine utilizes your practical technical abilities and scientific expertise to promote animal welfare, combining hands-on clinical skills with a deep understanding of biological health.

- **2. Medicine**

- Trinity College Dublin
- **739** points
- **Overview:** Medicine is a unique course in that students study a broad range of subjects with the primary goal of understanding the science and practice of healing. Medicine and healthcare are constantly evolving as new knowledge and therapies emerge to prevent and treat illness. Each day brings a new patient with new healthcare challenges.
- **Why we recommended this:** Medicine aligns with your passion for scientific inquiry and healthcare, allowing you to apply complex biological knowledge directly to patient care and clinical practice.

- **3. Pharmacy**

- Trinity College Dublin
- **601** points

- **Overview:** Pharmacy is the study of all aspects of drugs, both natural and synthetic in origin, including their chemistry, their uses in medicines, and how they work within the body. Pharmacists work in a variety of settings – community pharmacies, hospitals, long-term care facilities, and within the pharmaceutical industry, to name just a few. In many respects, their role as a key healthcare professional is to help people achieve the best results from their medications. Optional Fifth Year: M.Sc. (Pharm) Master's Degree (NFQ Level 9) Optional.
- **Why we recommended this:** Pharmacy suits your strengths in chemical sciences and healthcare, combining meticulous attention to detail with the vital role of managing patient medication and health outcomes.

• 4. Engineering

- Trinity College Dublin
- **577** points
- **Overview:** Engineering is about being creative in technical problem solving. Engineers make things possible by using mathematical and scientific principles together with analytical and design skills. They tackle existing problems by developing new solutions through innovative technologies. They also expand the frontiers of society by developing advanced materials, sustainable energy systems, construction technologies, transport systems, biomedical devices, and telecommunications infrastructure.
- **Why we recommended this:** Engineering provides a practical outlet for your technical problem-solving skills, allowing you to use scientific principles to design and build innovative solutions for global challenges.

• 5. Economics/Mathematics

- Trinity College Dublin
- **578** points
- **Overview:** Economics Economists explore how people and institutions behave and function when producing, exchanging and using goods and services. Economists' main motivation is to find mechanisms that encourage efficiency in the production and use of material goods and resources, while at the same time producing a pattern of income distribution that society finds acceptable. Mathematics Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques.
- **Why we recommended this:** Economics/Mathematics utilizes your superior quantitative skills to solve complex problems, blending theoretical logic with practical applications in finance, management, and resource distribution.

• 6. Psychology

- Trinity College Dublin

- **577** points
- **Overview:** The School of Psychology aims to offer a knowledge base and a set of skills that not only equip students for the many careers that exist in psychology, but also prepare students intellectually for other careers. Psychology is a branch of science that demands clear, rigorous thinking, numeracy and the ability to define, study and solve problems in complex, changing settings.
- **Why we recommended this:** Psychology aligns with your interest in social science and scientific inquiry, requiring clear thinking and numeracy to solve human problems in complex, changing social settings.

* **7. Actuarial Mathematics**

* Dublin City University

* **589** points

* **Overview:** Actuarial Mathematics could be the perfect course for you. It's accredited by the Institute and Faculty of Actuaries, UK, meaning you may be exempt from some of the exams needed to qualify as an actuary in Ireland and the UK. Before you embark on learning essential actuarial knowledge and theories, you'll be given solid mathematical training. In your first two years, you'll study the fundamental mathematical principles that underpin the actuarial and financial models covered in later years. You'll also study computer programming, economics and accounting.

* **Why we recommended this:** Actuarial Mathematics leverages your exceptional analytical skills and interest in business, offering a structured path to apply mathematical models to complex financial risk assessment and problem-solving.

* **8. Economics/Geography**

* Trinity College Dublin

* **578** points

* **Overview:** EconomicsAny society has to address the problem of how and what to produce for its material survival, and how the goods and services that are produced should be distributed among its population. Economists explore how people and institutions behave and function when producing, exchanging and using goods and services. GeographyGeography is the study of Earth's landscapes, peoples, places and environments. Fundamentally it is about the world in which we live. Geography offers a 21st century education by uniquely bridging the social sciences (human geography) with the natural sciences (physical geography). Geography also covers increasingly important environmental issues where humans affect physical environments and vice versa.

* **Why we recommended this:** Economics/Geography bridges the gap between social and physical sciences, allowing you to use your structured thinking to analyze how human behavior impacts global environments and resources.

* **9. Law**

* Trinity College Dublin

* **578** points

* **Overview:** The law degree will appeal to you if you are interested in society and how it works, and with the broader question of the regulation of inter-personal relationships. A general interest in history and political developments, will be an advantage, as the law is deeply linked to its historical and political context.

* **Why we recommended this:** Law connects your analytical rigor with your interest in social regulation, allowing you to explore the complex rules that govern relationships, politics, and historical developments.

* **10. Economics/Sociology**

* Trinity College Dublin

* **578** points

* **Overview:** EconomicsAny society has to address the problem of how and what to produce for its material survival, and how the goods and services that are produced should be distributed among its population. Economists explore how people and institutions behave and function when producing, exchanging and using goods and services. Economists' main motivation is to find mechanisms that encourage efficiency in the production and use of material goods and resources, while at the same time producing a pattern of income distribution that society finds acceptable. SociologyIf you want to understand the social changes taking place in the world today, and you are curious about people and society, then Sociology is for you. You will also gain the ability to understand topical issues and to present and communicate information and thoughts coherently. In addition, you will learn invaluable analytical, communication, research and presentation skills - transferable skills which can be applied to a wide range of careers and postgraduate programmes.

* **Why we recommended this:** Economics/Sociology matches your curiosity about social change and human behavior, providing a scientific and data-driven approach to understanding the dynamics of modern society.

* **11. Economics/Modern Language**

* Trinity College Dublin

* **578** points

* **Overview:** Economists explore how people and institutions behave and function when producing, exchanging and using goods and services. Economists' main motivation is to find mechanisms that encourage efficiency in the production and use of material goods and resources, while at the same time producing a pattern of income distribution that society finds acceptable. Students combine this subject with their choice of German or Spanish.

* **Why we recommended this:** Economics/Modern Language combines your talent for structured reasoning with an interest in global systems, offering a logical approach to understanding international exchange and societal behavior.

* **12. Philosophy, Political Science, Economics and Sociology**

* Trinity College Dublin

* **581** points

* **Overview:** Philosophy, Political Science, Economics and Sociology (PPES), offers a coherent and integrated introduction to the study of social sciences and philosophy. It brings together some of the most important approaches to understanding society and, in doing so, develops skills for a range of future careers and activities.

* **Why we recommended this:** Philosophy, Political Science, Economics and Sociology offers a diverse analytical framework for understanding society, matching your interests in law, social science, and complex theoretical systems.

* **13. Economics/History**

* Trinity College Dublin

* **578** points

* **Overview:** EconomicsAny society has to address the problem of how and what to produce for its material survival, and how the goods and services that are produced should be distributed among its population. Economists explore how people and institutions behave and function when producing, exchanging and using goods and services. HistoryThe four-year programme allows students to lay firm foundations in the first two years, with wide-ranging modules on medieval and modern history, Irish, European, American, environmental and global history, as well as on historical methods and approaches. The final two years of the programme allow students the chance to study several specialist modules in-depth and to undertake independent research on a subject of their own choice.

* **Why we recommended this:** Economics/History appeals to your love

of structured analysis and social understanding, providing the tools to examine past events through rigorous economic and logical frameworks.

* **14. Economics/Philosophy**

* Trinity College Dublin

* **578** points

* **Overview:** Economists explore how people and institutions behave and function when producing, exchanging and using goods and services. Economists' main motivation is to find mechanisms that encourage efficiency in the production and use of material goods and resources, while at the same time producing a pattern of income distribution that society finds acceptable. Philosophy This course offers the opportunity to engage in depth with questions of metaphysics (about the fundamental nature of reality), epistemology (the theory of knowledge), ethics (theories of right and wrong), political philosophy (the nature of the just state), philosophy of religion (reasoning about God), philosophy of mind (questions about thought, language and reason) and various other areas. We teach courses which have both systematic and historical emphases and in the higher years students can choose options and get to write a thesis on a topic of their own choice.

* **Why we recommended this:** Economics/Philosophy challenges your analytical mind to explore the fundamental nature of reality and ethics while applying logical models to understand economic behavior and social justice.

* **15. Biomedical, Health and Life Sciences**

* University College Dublin

* **589** points

* **Overview:** This course will appeal to those with a keen interest in science and in how research and technology can impact on human health. It is training scientists at the interface of science and medicine. You will learn how scientifically driven investigations can advance our knowledge of disease prevention, detection and treatment and translating these into clinical utility. The course will immerse you in modern medical and biological sciences and focus on the application of scientific developments. BHLS offers students a unique opportunity to complete a research project with a Principal Investigator in a biomedical research area that interests them and an opportunity to be involved in peer-reviewed publications.

* **Why we recommended this:** Biomedical, Health and Life Sciences connects your scientific curiosity with healthcare, focusing on research

and technological advancements to improve disease prevention and medical treatment.

* **16. Finance**

* University College Cork

* **577** points

* **Overview:** Finance is concerned with the operation of financial markets and the valuation of financial assets, in particular in stock, bond, foreign exchange and interest rate markets. The BSc Finance is based equally on the subject areas of corporate finance and financial economics. This combined approach provides graduates with a thorough grounding in each area.

* **Why we recommended this:** Finance suits your preference for organized, data-driven environments, focusing on the analytical valuation of assets and the operation of complex financial markets.

* **17. Law and French**

* Trinity College Dublin

* **589** points

* **Overview:** The Law and French degree programme offers a unique opportunity to study core and specialised legal modules but also the language, culture and political systems of France. Students must undertake an Erasmus year in France, exposing them to the law of that legal system.

* **Why we recommended this:** Law and French provides a rigorous intellectual challenge, combining your interest in legal systems and social structures with the analytical depth required for international legal studies.

* **18. Music Education**

* Trinity College Dublin

* **656** points

* **Overview:** If you love sharing music, already have a competent standard of music performance, and wish to combine these qualities with a teaching career, then this course is ideally suited to you. Whether your interests are primarily academic or practical, your experience of this vast and rich discipline will be greatly advanced. As an academic study, music fosters independence of thought, creativity and critical and analytical skills. This course offers opportunities to perform music, to share music with others via teaching and performing, and to conduct a number of different ensembles.

* **Why we recommended this:** Music Education matches your strong

interest in teaching and social development, focusing on the pedagogical skills needed to mentor others and share knowledge in a structured environment.

* **19. Mathematics**

* Trinity College Dublin

* **578** points

* **Overview:** Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques.

* **Why we recommended this:** Mathematics fits your profile perfectly by providing a pure outlet for your high-level logical reasoning, quantitative skills, and ability to model complex systems in various sciences.
