

RECOMMENDATION SET 1

- **0. Immersive Software Engineering**

- University of Limerick
- **651** points
- **Overview:** Immersive Software Engineering is a new computer science degree where you learn by doing. You get an integrated Bachelors/Masters qualification (level 9) in four years. You spend half your time learning on campus in a research-driven paradigm, in studios, working on projects, in teams, undergoing continuous assessment instead of end of term exams. You spend the other half of your time in paid residencies, where you solve some of society's toughest problems in excellent companies. The goal of Immersive Software Engineering is to turn curious, creative people like you into top notch problem solvers and software engineers, familiar with concepts, methods and tools, and with about 2 years of experience gained in the field in up to 5 companies.
- **Why we recommended this:** Immersive Software Engineering matches your strong technical skills, allowing you to solve complex problems through hands-on project work and intensive, real-world professional experience in the software industry.

- **1. Computer Science**

- University College Dublin
- **540** points
- **Overview:** The UCD Computer Science degree covers the fundamentals of Computer Science while also exposing students to the contemporary languages and technologies used in the industry. Key topics include programming, foundational mathematics, advanced software engineering, cloud development, theory of computer science, networks and security. The principal programming languages used are C, Java and Python. Specialised topics include computer graphics, game development, robotics, mobile development and others.
- **Why we recommended this:** Computer Science aligns with your passion for technology and logical thinking, focusing on programming and software engineering to develop cutting-edge solutions for the modern digital world.

- **2. Artificial Intelligence and Machine Learning**

- University of Limerick
- **487** points
- **Overview:** The Bachelor of Science programme is of four years duration. In the first year the student will undertake an intensive learning programme of computer science fundamentals, programming including an immediate introduction to an AI-appropriate language, and mathematics. In subsequent years the focus on artificial intelligence will intensify while also including core computer science aspects such as operating systems, data structures and algorithms, database systems, computer graphics. Data analytics / mining and more specialist topics such as language engineering / translation and cultural aspects of AI are covered in later years. Students who opt to exit after four years with a bachelors degree will complete, in their final year, a year-long Final year Project that is the culmination of their studies drawing on their skills in research, algorithm or system design, and implementation.
- **Why we recommended this:** Artificial Intelligence and Machine Learning leverages your high aptitude for mathematics and computing to explore advanced algorithms and data systems at the very forefront of modern technological innovation.

- **3. Computer Science and Information Technology**

- University of Galway
- **440** points
- **Overview:** We depend on electronic devices, such as computers and mobile phones, computer software and networks to store, process, transmit, retrieve and manipulate information. Students will cover the technology used in these devices and will focus on the development of the software applications that make these devices useful.
- **Why we recommended this:** Computer Science and Information Technology provides a solid foundation in software development, perfect for your analytical mindset and strong interest in how electronic devices process and transmit information.

- **4. Information Technology**

- University of Galway
- **350** points
- **Overview:** Students are introduced to the basics of IT and computer methods. The course teaches useful skills in computer programming and application in the first year. As part of an Arts degree, this subject is one of three subjects you choose in first year. In second and third year you continue with two of the subjects taken in First Arts. It may be possible to take an extra year studying abroad.
- **Why we recommended this:** Information Technology offers practical training in computer methods and programming, allowing you to build essential technical skills while exploring how digital tools solve practical information and communication challenges.

- **5. Mathematics**

- Trinity College Dublin
- **578** points
- **Overview:** Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques.
- **Why we recommended this:** Mathematics perfectly suits your exceptional analytical abilities, challenging you to use logical reasoning and quantitative techniques to model and understand complex systems across various scientific and financial fields.

- **6. Mathematics (Social Sciences Two Subject Combination)**

- University College Dublin
- **490** points
- **Overview:** Mathematics has long played a central role in our quest to fully describe and understand the natural world. Nowadays, it is also a vital tool in many of the social sciences. Those who concentrate on this subject will gain an understanding of mathematical concepts and learn how to prove key facts and solve problems using deductive reasoning.
- **Why we recommended this:** Mathematics (Social Sciences Two Subject Combination) utilizes your strong numerical skills to solve human-centric problems, applying rigorous deductive reasoning to understand and describe patterns within modern society.

- **7. Statistics**

- University College Dublin
- **420** points
- **Overview:** If you are interested in studying Statistics with an Arts and Humanities or Social Science subject, then this degree could be for you. Statistics is the science of transforming data into knowledge and understanding, providing a principled approach to making data-informed decisions. Statistical methods enable us to gain insights from data, and with the advent of powerful computing technology, these methods have become widely used in many sectors.
- **Why we recommended this:** Statistics appeals to your logical strengths, training you to transform complex data into meaningful insights and informed

decisions using powerful computing technology and rigorous mathematical principles.

- **8. Theoretical Physics**

- Trinity College Dublin
- **566** points
- **Overview:** Theoretical Physics explores the natural world at its most fundamental level, using mathematical theories guided by experimental investigation. For some it is the foundation for an academic career in mathematics or physics. For others it provides the basis for many career options in industry, medicine, law, finance and computing. Trinity provides a course which ranges widely across physics and mathematics. Its graduates are in demand for their technical skills and versatility.
- **Why we recommended this:** Theoretical Physics challenges your high-level mathematical and analytical skills, exploring the fundamental laws of the universe through sophisticated theoretical modeling and deep, research-driven intellectual investigation.

- **9. Common Entry into Actuarial and Financial Mathematics**

- Dublin City University
- **555** points
- **Overview:** If you'd like to qualify for in-demand quantitative roles in the insurance and financial industry, the Common Entry into Actuarial and Financial Mathematics programme (CAFM) might be for you. It's especially ideal if you'd like the flexibility to explore different areas of maths before choosing how you'll specialise. You'll learn the fundamental mathematical principles that underpin the state-of-the-art actuarial and financial models you'll study in later years, along with computer programming, data analysis, economics and accounting.
- **Why we recommended this:** Common Entry into Actuarial and Financial Mathematics uses your strong quantitative talents to master financial modeling and risk analysis, preparing you for high-level technical roles in the insurance industry.

- **10. Engineering**

- Trinity College Dublin
- **577** points
- **Overview:** Engineering is about being creative in technical problem solving. Engineers make things possible by using mathematical and scientific principles together with analytical and design skills. They tackle existing problems by developing new solutions through innovative technologies. They also expand the frontiers of society by developing advanced materials, sustainable energy systems, construction technologies, transport systems, biomedical devices, and telecommunications infrastructure.
- **Why we recommended this:** Engineering allows you to apply your technical problem-solving skills and mathematical principles to design innovative technologies, ranging from sustainable energy systems to advanced infrastructure and biomedical devices.

- **11. Mechanical Engineering**

- University of Galway
- **566** points
- **Overview:** Mechanical Engineering is a subject concerned with the design and manufacture of parts and systems that make up the range of machinery and equipment you see around you, from a can opener to a jet aircraft. Mechanical engineers design the tools and processes necessary to create all man-made products, and are often involved from conceiving of an idea right through to seeing it as a finished product ready for its commercial application.
- **Why we recommended this:** Mechanical Engineering matches your practical and analytical interests, focusing on the design and manufacture of complex machinery, from small medical components to large-scale industrial jet aircraft.

- **12. Aeronautical Engineering**

- University of Limerick
- **556** points
- **Overview:** The Bachelor of Engineering (B.E.) and Masters of Engineering (M.E.) programmes are 4 years and 5 years in duration, respectively. Both include an eight month period of Cooperative Education spent in an appropriate industrial environment. The course provides a broad and practical programme of study, which gives you a good understanding of aircraft design, aerodynamics, structures, propulsion, control, materials, avionics, business and maintenance, and enables you to work in all sectors of the aerospace industry.
- **Why we recommended this:** Aeronautical Engineering combines your technical precision and interest in physics, providing practical training in aircraft design, aerodynamics, and propulsion systems within the fast-paced and innovative aerospace industry.

- **13. Engineering (Electrical & Electronic Engineering)**

- University College Cork
- **543** points
- **Overview:** BE Electrical and Electronic Engineering is a four-year professional engineering course designed to prepare students for employment in the electrical and electronic sectors in Ireland and abroad. It has a broad curriculum with strong practical content, including a work placement. It has an excellent record for graduate employment.
- **Why we recommended this:** Engineering (Electrical & Electronic Engineering) suits your interest in hardware and systems, focusing on the practical application of electrical principles to develop modern electronic technologies and global infrastructure.

- **14. Physics and Astrophysics**

- University College Cork
- **543** points
- **Overview:** Fundamentally Physics and Astrophysics is concerned with the study of the universe, from the largest galaxies to the nature of matter itself. Physics, and the technologies developed by physicists, play a major role in chemistry, biology, medicine, electronics, geology, and in the applied fields of optics, nanotechnology, computer science and engineering.
- **Why we recommended this:** Physics and Astrophysics appeals to your deep curiosity about the universe, utilizing your strong mathematical foundation to study everything from subatomic particles to the largest distant galaxies.

- **15. Physics with Astronomy**

- Dublin City University
- **413** points
- **Overview:** Do you enjoy maths and have a keen interest in how the universe works? This course is ideal for you. It's all about how physics can help to answer the puzzles of the universe. Astronomy is the oldest of the sciences, but you'll discover how it's evolving incredibly quickly in the 21st century, with more and more sensitive instruments yielding more and better data. By the time you graduate, you'll know the latest techniques used to observe the sky at different energies, and why multi-wavelength observations are crucial to understanding the true nature of cosmic sources. You'll learn through lectures and by doing lab work, where you'll get to explore the nature of sources using real X-ray data collected by the XMM-Newton observatory.
- **Why we recommended this:** Physics with Astronomy leverages your analytical strengths to solve cosmic puzzles, teaching you advanced observational techniques to understand the true nature of stars and galaxies across the universe.

- **16. Biological, Biomedical & Biomolecular Sciences**

• 16. Biological, Biomedical & Biomolecular Sciences

- University College Dublin
- **544** points
- **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
- **Why we recommended this:** Biological, Biomedical & Biomolecular Sciences utilizes your analytical mindset to explore the foundations of life, offering diverse pathways to specialize in genetics, microbiology, or complex medicinal research.

• 17. Earth and Environmental Sciences

- University College Dublin
- **544** points
- **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
- **Why we recommended this:** Earth and Environmental Sciences allows you to apply your scientific curiosity to the natural world, using data and research to understand complex ecological systems and vital geological processes.

• 18. Chemistry

- University College Dublin
- **544** points
- **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
- **Why we recommended this:** Chemistry fits your strong interest in scientific inquiry, providing a rigorous framework to study matter and its properties through detailed laboratory experimentation and sophisticated theoretical analysis.

• 19. Engineering (Process and Chemical Engineering)

- University College Cork
- **543** points
- **Overview:** The first year of the BE is a broad education in engineering fundamentals. Process and Chemical Engineers are involved in the design, modification and operation of processes to produce products across a broad range of process industries, including bio/pharmaceuticals, food and drinks production, bulk chemicals and fuels/energy. Process and Chemical engineering helps provide a pathway towards meeting societal requirements around health and well being, energy provision, food production, water supply, waste management and consumer goods.
- **Why we recommended this:** Engineering (Process and Chemical Engineering) combines your interest in chemistry with practical problem-solving, focusing on designing efficient processes to produce essential products like pharmaceuticals, food, and sustainable fuels.

RECOMMENDATION SET 2

• 0. Dental Science

- Trinity College Dublin
- **625** points
- **Overview:** Dental Science is the study of the oral cavity and the diseases associated with oral tissues. This five-year programme is designed to ensure that graduates can safely and effectively deliver the full range of primary dental care, including prevention, diagnosis and treatment of oral and dental diseases.
- **Why we recommended this:** Dental Science combines your strong scientific interest with the practical precision indicated by your profile, allowing you to apply analytical research to hands-on clinical procedures.

• 1. Economics and Finance

- University College Dublin
- **625** points
- **Overview:** If you have a strong interest or ability in economics, maths and statistics, this degree provides everything you need for a future career in the areas of financial economics, banking and finance. Recognised as one of the premier degrees in its field in Ireland and internationally, it equips students with outstanding expertise in quantitative methods, analytical skills and a rigorous preparation in economics and finance. The skills that the course develops are valuable on their own in many careers and provide the essential background for learning Economics and Finance.
- **Why we recommended this:** Economics and Finance aligns with your exceptional aptitude for mathematics and logical reasoning, focusing on complex quantitative methods to solve intricate financial and economic problems.

• 2. Management Science and Information Systems Studies

- Trinity College Dublin
- **625** points
- **Overview:** Students learn how to use techniques from disciplines such as business, mathematics, computer science, statistics and management science to solve real world problems. There is also a firm emphasis on interpersonal skills such as verbal communication, interviewing, teamwork and report writing.
- **Why we recommended this:** Management Science and Information Systems Studies bridges your high interest in computers and mathematics, focusing on analytical problem-solving and the technical design of complex organizational systems.

• 3. Global Business (USA)

- Dublin City University
- **617** points
- **Overview:** Experience the world of work and study in the USA while you gain two business degrees, experience two countries and complete two work placements. The BA in Global Business (USA) is a passport to a career in international business. This unique course will give you a broad understanding of international business, as well as a rich intercultural experience, and high quality work placements with leading companies, in Ireland and the US.
- **Why we recommended this:** Global Business (USA) offers a structured, international perspective on commerce, suiting your preference for systematic processes and your ability to process complex, multi-layered information.

• 4. Actuarial & Financial Studies

4. Actuarial & Financial Studies

- University College Dublin
- **613 points**
- **Overview:** Studying UCD Actuarial & Financial Studies (BAFS) degree requires a multidisciplinary education in fields such as mathematics, economics, finance, statistics, risk management and professionalism. It takes a combination of strong analytical skills, business knowledge and understanding of human behaviour to design and manage programmes that control risk and guarantee sufficient funds for the insurance and pension sectors. Actuaries have traditionally worked mostly in the insurance and pensions industries but are increasingly moving into wider fields, where they can employ their range of skills. The course also opens up options to work in finance, investment and trading.
- **Why we recommended this:** Actuarial & Financial Studies matches your talent for advanced mathematics and statistics, providing a rigorous analytical environment to assess risk and solve complex financial challenges.

5. Engineering with Management

- Trinity College Dublin
- **613 points**
- **Overview:** Engineering with Management is concerned with the analysis, design, improvement, installation, and management of integrated systems of people, finance, materials and equipment. Our graduates have the technical skills common to all excellent engineers, with this knowledge augmented by an understanding of the commercial and industrial environment and the ability to generate innovative solutions to the problems of the world.
- **Why we recommended this:** Engineering with Management leverages your strong technical interests and mathematical aptitude, focusing on the practical application of scientific principles and the design of efficient, integrated systems.

6. Law/Business Studies

- Trinity College Dublin
- **613 points**
- **Overview:** LawThe law degree will appeal to you if you are interested in society and how it works, how we regulate the relationships between people. Given the wide range of legal modules, the degree attracts students with a broad range of interests. Business StudiesThis four year programme offers the opportunity to focus upon the many areas of overlapping interest between the two disciplines, for example, the structure of companies and other forms of business organisation, competition law and regulation of markets, consumer law, labour law, finance and financial markets, taxation, the protection of intellectual property and international perspectives on law and business.
- **Why we recommended this:** Law/Business Studies draws on your logical reasoning and interest in systematic frameworks, offering a disciplined approach to understanding regulations and the structures of global commerce.

7. Law/History

- Trinity College Dublin
- **613 points**
- **Overview:** Law The law degree will appeal to you if you are interested in society and how it works, how we regulate the relationships between people. Given the wide range of legal modules, the degree attracts students with a broad range of interests. Those interested in politics are attracted to subjects such as constitutional law. History The History programme introduces students to the diversity of historical studies, which include modules covering medieval and modern periods, including Irish, European, and American history, as well as some modules exploring the skills and methods which historians use, and the kinds of debates in which historians engage.
- **Why we recommended this:** Law/History suits your deep analytical drive and research-oriented mindset, requiring the rigorous evaluation of evidence and a detailed understanding of complex societal frameworks.

8. Mathematics/Modern Language

- Trinity College Dublin
- **613 points**
- **Overview:** MathematicsMathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques. You can choose between German, Irish, Italian, Russian and Spanish. Apart from French and Irish all languages can be studied from both advanced and beginners level.
- **Why we recommended this:** Mathematics/Modern Language capitalizes on your peak interest in quantitative reasoning while adding a linguistic dimension to your strong logical and analytical capabilities.

9. Mathematics/Music

- Trinity College Dublin
- **613 points**
- **Overview:** Mathematics Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques. Music Studying music will allow you to engage with a range of traditions to acquire a profound understanding of how music works in theory and in creative practice. If you are interested in understanding music's place in society, developing music technology skills, writing music, or improving your skills as an informed performer, this course could be for you.
- **Why we recommended this:** Mathematics/Music merges your aptitude for complex patterns and logical structures with creative practice, making use of your primary strength in high-level mathematical theory.

10. Mathematics/Philosophy

- Trinity College Dublin
- **613 points**
- **Overview:** Mathematics Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques. Philosophy This course offers the opportunity to engage in depth with questions of metaphysics (about the fundamental nature of reality), epistemology (the theory of knowledge), ethics (theories of right and wrong), political philosophy (the nature of the just state), philosophy of religion (reasoning about God), philosophy of mind (questions about thought, language and reason) and various other areas.
- **Why we recommended this:** Mathematics/Philosophy is ideal for your profile, as both disciplines demand the extreme logical rigor, abstract reasoning, and analytical depth that your interests highlight.

11. Global Business

- Trinity College Dublin
- **602 points**
- **Overview:** The Global Business degree is a unique programme, designed for students who wish to focus on business from the very beginning of their degree. The degree is both innovative and practical with a strong focus on experiential learning. Trinity Business School places an emphasis on blended learning, where academic excellence meets industry experience with a keen focus on how business operates within the global economy.

- **Why we recommended this:** Global Business provides a practical and systematic exploration of the global economy, suiting your interest in understanding how complex, large-scale systems function.

- **12. Pharmacy**

- University College Cork
- **602 points**
- **Overview:** A pharmacist is a healthcare team member specifically concerned with drugs and medicines. Pharmacy at UCC provides the confidence, skills, and knowledge to make a difference in the pharmaceutical arena.
- **Why we recommended this:** Pharmacy aligns with your interests in chemical science and healthcare, allowing you to apply your strong analytical skills to the study of medicine and pharmaceutical research.

- **13. Actuarial Mathematics**

- Dublin City University
- **589 points**
- **Overview:** Actuarial Mathematics could be the perfect course for you. It's accredited by the Institute and Faculty of Actuaries, UK, meaning you may be exempt from some of the exams needed to qualify as an actuary in Ireland and the UK. Before you embark on learning essential actuarial knowledge and theories, you'll be given solid mathematical training. In your first two years, you'll study the fundamental mathematical principles that underpin the actuarial and financial models covered in later years. You'll also study computer programming, economics and accounting.
- **Why we recommended this:** Actuarial Mathematics leverages your exceptional mathematical talent and logical focus, providing a pathway into a career built on quantitative precision and complex data analysis.

- **14. Biomedical, Health and Life Sciences**

- University College Dublin
- **589 points**
- **Overview:** This course will appeal to those with a keen interest in science and in how research and technology can impact on human health. It is training scientists at the interface of science and medicine. You will learn how scientifically driven investigations can advance our knowledge of disease prevention, detection and treatment and translating these into clinical utility. The course will immerse you in modern medical and biological sciences and focus on the application of scientific developments. BHLS offers students a unique opportunity to complete a research project with a Principal Investigator in a biomedical research area that interests them and an opportunity to be involved in peer-reviewed publications.
- **Why we recommended this:** Biomedical, Health and Life Sciences fits your scientific curiosity, allowing you to engage in high-level research and apply your analytical skills to medical breakthroughs.

- **15. Law and French**

- Trinity College Dublin
- **589 points**
- **Overview:** The Law and French degree programme offers a unique opportunity to study core and specialised legal modules but also the language, culture and political systems of France. Students must undertake an Erasmus year in France, exposing them to the law of that legal system.
- **Why we recommended this:** Law and French utilizes your logical reasoning and interest in systematic rules, combining a rigorous legal education with the analytical challenge of mastering a foreign language.

- **16. Physiotherapy**

- University of Limerick
- **589 points**
- **Overview:** The Bachelor of Science in Physiotherapy is a four-year degree programme which includes a total of 31 weeks of clinical practice in the last two years of the programme. The first year provides a foundation in Anatomy and Physiology, communication and behaviour, and an Introduction to Physiotherapy Practice. Over the remaining three years you will undertake studies in the various disciplines of physiotherapy including cardiorespiratory care, clinical neurology and musculoskeletal disorders for people across the lifespan. Research and evidence-based practice are core elements underpinning the programme.
- **Why we recommended this:** Physiotherapy connects your practical, hands-on interests with your scientific aptitude, focusing on the physical application of healthcare and the analytical diagnosis of human movement.

- **17. Philosophy, Political Science, Economics and Sociology**

- Trinity College Dublin
- **581 points**
- **Overview:** Philosophy, Political Science, Economics and Sociology (PPES), offers a coherent and integrated introduction to the study of social sciences and philosophy. It brings together some of the most important approaches to understanding society and, in doing so, develops skills for a range of future careers and activities.
- **Why we recommended this:** Philosophy, Political Science, Economics and Sociology offers a broad analytical platform, perfect for a mind that enjoys exploring complex social systems through logical and evidence-based frameworks.

- **18. Economics/Geography**

- Trinity College Dublin
- **578 points**
- **Overview:** EconomicsAny society has to address the problem of how and what to produce for its material survival, and how the goods and services that are produced should be distributed among its population. Economists explore how people and institutions behave and function when producing, exchanging and using goods and services. GeographyGeography is the study of Earth's landscapes, peoples, places and environments. Fundamentally it is about the world in which we live. Geography offers a 21st century education by uniquely bridging the social sciences (human geography) with the natural sciences (physical geography). Geography also covers increasingly important environmental issues where humans affect physical environments and vice versa.
- **Why we recommended this:** Economics/Geography blends your interest in physical sciences with data-driven social analysis, requiring the strong logical skills and research focus your profile suggests.

- **19. Economics/History**

- Trinity College Dublin
- **578 points**
- **Overview:** EconomicsAny society has to address the problem of how and what to produce for its material survival, and how the goods and services that are produced should be distributed among its population. Economists explore how people and institutions behave and function when producing, exchanging and using goods and services. HistoryThe four-year programme allows students to lay firm foundations in the first two years, with wide-ranging modules on medieval and modern history, Irish, European, American, environmental and global history, as well as on historical methods and approaches. The final two years of the programme allow students the chance to study several specialist modules in-depth and to undertake independent research on a subject of their own choice.
- **Why we recommended this:** Economics/History focuses on the research and analysis of complex systems over time, suiting your preference for deep

investigation and your strong interest in logical frameworks.
