

RECOMMENDATION SET 1

• 0. Computer Science

- University College Dublin
- **540** points
- **89.7%** similarity
- **Overview:** The UCD Computer Science degree covers the fundamentals of Computer Science while also exposing students to the contemporary languages and technologies used in the industry. Key topics include programming, foundational mathematics, advanced software engineering, cloud development, theory of computer science, networks and security. The principal programming languages used are C, Java and Python. Specialised topics include computer graphics, game development, robotics, mobile development and others.
- **Why we recommended this:** Computer Science aligns with your peak interest in technology and strong analytical skills, offering a deep dive into programming, software engineering, and the logic behind modern digital systems.

• 1. Artificial Intelligence and Machine Learning

- University of Limerick
- **487** points
- **89.2%** similarity
- **Overview:** The Bachelor of Science programme is of four years duration. In the first year the student will undertake an intensive learning programme of computer science fundamentals, programming including an immediate introduction to an AI-appropriate language, and mathematics. In subsequent years the focus on artificial intelligence will intensify while also including core computer science aspects such as operating systems, data structures and algorithms, database systems, computer graphics. Data analytics / mining and more specialist topics such as language engineering / translation and cultural aspects of AI are covered in later years. Students who opt to exit after four years with a bachelors degree will complete, in their final year, a year-long Final year Project that is the culmination of their studies drawing on their skills in research, algorithm or system design, and implementation.
- **Why we recommended this:** Artificial Intelligence and Machine Learning matches your passion for computing and complex problem-solving, focusing on intensive programming and the mathematical foundations of advanced autonomous systems.

• 2. Computer Science and Information Technology

- University of Galway
- **440** points
- **88.6%** similarity
- **Overview:** We depend on electronic devices, such such as computers and mobile phones, computer software and networks to store, process, transmit, retrieve and manipulate information. Students will cover the technology used in these devices and will focus on the development of the software applications that make these devices useful.
- **Why we recommended this:** Computer Science and Information Technology suits your preference for digital tools, focusing on the software development and technical infrastructure required to power modern electronic devices.

• 3. Information Technology

- University of Galway
- **350** points
- **87.0%** similarity
- **Overview:** Students are introduced to the basics of IT and computer methods. The course teaches useful skills in computer programming and application in the first year. As part of an Arts degree, this subject is one of three subjects you choose in first year. In second and third year you continue with two of the subjects taken in First Arts. It may be possible to take an extra year studying abroad.
- **Why we recommended this:** Information Technology provides a versatile pathway into computing, allowing you to develop essential programming skills while maintaining a broader perspective through an Arts-based framework.

• 4. Mechatronic Engineering

- Dublin City University
- **533** points
- **82.8%** similarity
- **Overview:** This course all about how we build intelligent machines through the meeting of mechanical systems such as engines and machines with the electronics needed to control them. This course perfectly blends mechanical engineering and electronic engineering. It offers classes in 3D modelling and design, for example, as well as circuit design and programming. Our students and staff are intrigued and inspired by the interplay between electronics and moving parts in connected devices and state-of-the-art machinery. Gain knowledge for the real world In third year, you'll get to do a six-month INTRA work placement and throughout the course, you'll do lots of project-based learning where you use the latest real-world tools and technologies to solve problems and, of course, build robots. That's not all. You'll also take some business-based modules, so you can learn how to develop a business plan and work with other parts of an enterprise. While you can go on from this course to work in either mechanical or electronic engineering, our graduates typically end up in roles where they incorporate one into the other. For example, they might put sensors into a machine to measure aspects of how it's working or develop control systems for a lift or a car. Either way, mechatronics graduates are in huge demand.
- **Why we recommended this:** Mechatronic Engineering bridges your technical engineering interests and computing skills, focusing on the design and construction of intelligent machines, robotics, and integrated electronic systems.

• 5. Post Primary Teacher Education - Technology, Engineering and Graphics

- Dublin City University
- **402** points
- **74.9%** similarity
- **Overview:** This is a course for people who are interested in becoming post-primary teachers in the areas of Technology, Engineering and Graphics. On this degree, you'll learn about designing and innovating, and in coming up with creative solutions for the challenges facing society and industry. The four-year programme will be delivered through a partnership of DCU and Technological University of the Shannon (TUS). The first two years of study will take place at the TUS Athlone campus, and the final two years at the DCU Institute of Education in Dublin.
- **Why we recommended this:** Post Primary Teacher Education - Technology, Engineering and Graphics combines your engineering talents with a desire to guide others, preparing you to teach design and innovation to students.

• 6. Mathematics and Computer Science with concurrent Teacher Education

- University of Limerick
- **455** points
- **74.7%** similarity
- **Overview:** This degree, with a specialism in teaching Mathematics and Computer Science, is designed to produce graduates with the mathematical knowledge and skills to satisfy the needs of Irish Second-level schools in teaching the Maths curriculum. Graduates will also be qualified to teach the new Leaving Certificate Computer Science curriculum, as well as short courses in coding and digital literacy for junior cycle.

- **Why we recommended this:** Mathematics and Computer Science with concurrent Teacher Education perfectly integrates your top interests in maths and technology with a professional qualification for the modern classroom.
- **7. Arts (Mathematics and Education)**
 - University of Galway
 - **423** points
 - **74.3%** similarity
 - **Overview:** This degree combines a teacher training qualification with teaching practice throughout the duration of the programme. As part of the programme you will undertake a teaching placement in each year, completing 100 hours of teaching between years 1-3 and a further 13 weeks a post-primary school in your fourth year.
 - **Why we recommended this:** Arts (Mathematics and Education) leverages your high mathematical aptitude and educational interest, providing rigorous academic training alongside extensive practical experience in post-primary teaching environments.
 - **8. Education (Computer Science and Mathematical Studies)**
 - University of Galway
 - **402** points
 - **74.0%** similarity
 - **Overview:** This is a degree course allows you to combine the study of mathematics with computer science and post-primary teaching education. This is a four year concurrent initial teacher education programme and includes a number of school placement opportunities throughout the course. At the end of this four year course graduates will be eligible to teach computer science and mathematics
 - **Why we recommended this:** Education (Computer Science and Mathematical Studies) merges your logical strengths in computing and maths, qualifying you to teach these vital technical subjects in the secondary school sector.
 - **9. Mathematics**
 - Trinity College Dublin
 - **578** points
 - **94.2%** similarity
 - **Overview:** Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques.
 - **Why we recommended this:** Mathematics offers a rigorous platform for your exceptional analytical and logical abilities, applying complex theoretical concepts to solve real-world problems in science and finance.
 - **10. Mathematics (Social Sciences Two Subject Combination)**
 - University College Dublin
 - **490** points
 - **93.1%** similarity
 - **Overview:** Mathematics has long played a central role in our quest to fully describe and understand the natural world. Nowadays, it is also a vital tool in many of the social sciences. Those who concentrate on this subject will gain an understanding of mathematical concepts and learn how to prove key facts and solve problems using deductive reasoning.
 - **Why we recommended this:** Mathematics (Social Sciences Two Subject Combination) utilizes your strong deductive reasoning to understand the natural world and address complex social problems through precise mathematical modeling.
 - **11. Statistics**
 - University College Dublin
 - **420** points
 - **91.7%** similarity
 - **Overview:** If you are interested in studying Statistics with an Arts and Humanities or Social Science subject, then this degree could be for you. Statistics is the science of transforming data into knowledge and understanding, providing a principled approach to making data-informed decisions. Statistical methods enable us to gain insights from data, and with the advent of powerful computing technology, these methods have become widely used in many sectors.
 - **Why we recommended this:** Statistics appeals to your data-driven mindset, using your computing and mathematical skills to extract meaningful insights and inform high-level decision-making processes across various sectors.
 - **12. Actuarial & Financial Studies**
 - University College Dublin
 - **613** points
 - **86.6%** similarity
 - **Overview:** Studying UCD Actuarial & Financial Studies (BAFS) degree requires a multidisciplinary education in fields such as mathematics, economics, finance, statistics, risk management and professionalism. It takes a combination of strong analytical skills, business knowledge and understanding of human behaviour to design and manage programmes that control risk and guarantee sufficient funds for the insurance and pension sectors. Actuaries have traditionally worked mostly in the insurance and pensions industries but are increasingly moving into wider fields, where they can employ their range of skills. The course also opens up options to work in finance, investment and trading.
 - **Why we recommended this:** Actuarial & Financial Studies challenges your high-level mathematical and statistical talents, applying them to risk management, finance, and the complex mechanics of the insurance industry.
 - **13. Mechanical and Manufacturing Engineering**
 - MTU Kerry
 - **614** points
 - **97.2%** similarity
 - **Overview:** Mechanical and Manufacturing Engineering is a blended degree that brings in the best of manufacturing and mechanical engineering, culminating in flexible and adaptable engineers to meet industry needs. The REEDl student engineer will learn about the design and development of processes whilst also gaining an equally strong knowledge of the design, development and operation of products and equipment.
 - **Why we recommended this:** Mechanical and Manufacturing Engineering matches your practical problem-solving focus, allowing you to design and develop the machinery and processes essential for modern industrial innovation.
 - **14. Engineering**
 - Trinity College Dublin
 - **577** points
 - **96.7%** similarity
 - **Overview:** Engineering is about being creative in technical problem solving. Engineers make things possible by using mathematical and scientific principles together with analytical and design skills. They tackle existing problems by developing new solutions through innovative technologies. They

also expand the frontiers of society by developing advanced materials, sustainable energy systems, construction technologies, transport systems, biomedical devices, and telecommunications infrastructure.

- **Why we recommended this:** Engineering provides a creative yet technical outlet for your scientific interests, using mathematical principles to develop sustainable technologies and solve complex infrastructural challenges.

- **15. Mechanical Engineering**

- University of Galway
- **566** points
- **96.5%** similarity
- **Overview:** Mechanical Engineering is a subject concerned with the design and manufacture of parts and systems that make up the range of machinery and equipment you see around you, from a can opener to a jet aircraft. Mechanical engineers design the tools and processes necessary to create all man-made products, and are often involved from conceiving of an idea right through to seeing it as a finished product ready for its commercial application.
- **Why we recommended this:** Mechanical Engineering applies your strong technical design and manufacturing skills to create everything from consumer products to jet aircraft through rigorous scientific analysis.

- **16. Classical Civilisation/Modern Language**

- Trinity College Dublin
- **358** points
- **72.5%** similarity
- **Overview:** The study of Classical Civilisation is concerned with the literature, thought and culture of Ancient Greece and Rome. Through the examination and contextualisation of literary works and the analysis of the main aspects of ancient history and art, you will develop a thorough knowledge of the classical world and a critical approach to Greek and Roman literature. All texts are studied in translation and no knowledge of Greek or Latin is required, but there are opportunities to study the languages at an introductory level.
- **Why we recommended this:** Classical Civilisation/Modern Language taps into your interest in languages and history, offering a deep critical analysis of ancient literature, art, and cultural thought.

- **17. Classical Languages/Modern Language**

- Trinity College Dublin
- **331** points
- **71.7%** similarity
- **Overview:** The study of Classical Languages is concerned with the language, literature and thought of either Ancient Greece or Ancient Rome. You will choose to study either Greek or Latin. Through the reading of literature in the original language and the examination of key aspects of ancient history, you will develop a thorough knowledge of the classical world and a critical approach to textual and material culture. Students combine this subject with their choice of French or German.
- **Why we recommended this:** Classical Languages/Modern Language combines your linguistic talents with historical study, focusing on the meticulous analysis of ancient texts alongside the development of modern language proficiency.

- **18. Linguistics/Classical Languages**

- Trinity College Dublin
- **498** points
- **71.2%** similarity
- **Overview:** Linguistics Students of Linguistics engage in evidence-based analysis of language, acquiring skills and techniques that allow investigation of different aspects of language structure such as sound, words and grammar. This involves key transferable skills in problem solving and critical thinking. Classical Languages The study of Classical Languages is concerned with the language, literature and thought of either Ancient Greece or Ancient Rome. You will choose to study either Greek or Latin. Through the reading of literature in the original language and the examination of key aspects of ancient history, you will develop a thorough knowledge of the classical world and a critical approach to textual and material culture.
- **Why we recommended this:** Linguistics/Classical Languages suits your interest in language structure, using evidence-based analysis and critical thinking to explore how sounds, words, and grammar function across history.

- **19. Physics**

- University College Dublin
- **544** points
- **94.4%** similarity
- **Overview:** The UCD Science (DN200) course offers 27 degree subjects categorised into streams. Students can study subjects from more than one stream in first year. It is also possible for students to change their stream in first year. At the end of first year, students choose a minimum of two subjects to study in second year (for example Statistics and Mathematics or Genetics and Microbiology). Students will major in one of these subjects in third and fourth year.
- **Why we recommended this:** Physics applies your high capacity for scientific inquiry and practical experimentation, exploring the fundamental laws of nature through a flexible and diverse academic curriculum.

RECOMMENDATION SET 2

- **0. Medicine**

- Trinity College Dublin
- **739** points
- **52.0%** similarity
- **Overview:** Medicine is a unique course in that students study a broad range of subjects with the primary goal of understanding the science and practice of healing. Medicine and healthcare are constantly evolving as new knowledge and therapies emerge to prevent and treat illness. Each day brings a new patient with new healthcare challenges.
- **Why we recommended this:** Medicine aligns with your strong analytical mind and desire to help others, combining scientific research with compassionate care to solve complex health challenges.

- **1. Music Education**

- Trinity College Dublin
- **656** points
- **46.5%** similarity
- **Overview:** If you love sharing music, already have a competent standard of music performance, and wish to combine these qualities with a teaching career, then this course is ideally suited to you. Whether your interests are primarily academic or practical, your experience of this vast and rich discipline will be greatly advanced. As an academic study, music fosters independence of thought, creativity and critical and analytical skills. This

course offers opportunities to perform music, to share music with others via teaching and performing, and to conduct a number of different ensembles.

- **Why we recommended this:** Music Education matches your high interest in teaching, allowing you to share knowledge and foster creativity in others through a structured and supportive learning environment.

- **2. Immersive Software Engineering**

- University of Limerick
- **651** points
- **69.9%** similarity
- **Overview:** Immersive Software Engineering is a new computer science degree where you learn by doing. You get an integrated Bachelors/Masters qualification (level 9) in four years. You spend half your time learning on campus in a research-driven paradigm, in studios, working on projects, in teams, undergoing continuous assessment instead of end of term exams. You spend the other half of your time in paid residencies, where you solve some of society's toughest problems in excellent companies. The goal of Immersive Software Engineering is to turn curious, creative people like you into top notch problem solvers and software engineers, familiar with concepts, methods and tools, and with about 2 years of experience gained in the field in up to 5 companies.
- **Why we recommended this:** Immersive Software Engineering is a perfect fit for your top interest in computers and your natural talent for logical problem-solving through hands-on, research-driven projects.

- **3. Dental Science**

- Trinity College Dublin
- **625** points
- **52.0%** similarity
- **Overview:** Dental Science is the study of the oral cavity and the diseases associated with oral tissues. This five-year programme is designed to ensure that graduates can safely and effectively deliver the full range of primary dental care, including prevention, diagnosis and treatment of oral and dental diseases.
- **Why we recommended this:** Dental Science suits your analytical nature and practical skills, offering a career that blends precise clinical work with the interpersonal aspects of providing essential healthcare.

- **4. Economics and Finance**

- University College Dublin
- **625** points
- **48.7%** similarity
- **Overview:** If you have a strong interest or ability in economics, maths and statistics, this degree provides everything you need for a future career in the areas of financial economics, banking and finance. Recognised as one of the premier degrees in its field in Ireland and internationally, it equips students with outstanding expertise in quantitative methods, analytical skills and a rigorous preparation in economics and finance. The skills that the course develops are valuable on their own in many careers and provide the essential background for learning Economics and Finance.
- **Why we recommended this:** Economics and Finance appeals to your strong mathematical aptitude and logical mindset, focusing on the rigorous quantitative methods needed to understand and manage complex financial systems.

- **5. Management Science and Information Systems Studies**

- Trinity College Dublin
- **625** points
- **62.6%** similarity
- **Overview:** Students learn how to use techniques from disciplines such as business, mathematics, computer science, statistics and management science to solve real world problems. There is also a firm emphasis on interpersonal skills such as verbal communication, interviewing, teamwork and report writing.
- **Why we recommended this:** Management Science and Information Systems Studies bridges your passion for technology and mathematics, using sophisticated data analysis and computing skills to solve real-world organizational problems.

- **6. Global Business (USA)**

- Dublin City University
- **617** points
- **51.0%** similarity
- **Overview:** Experience the world of work and study in the USA while you gain two business degrees, experience two countries and complete two work placements. The BA in Global Business (USA) is a passport to a career in international business. This unique course will give you a broad understanding of international business, as well as a rich intercultural experience, and high quality work placements with leading companies, in Ireland and the US.
- **Why we recommended this:** Global Business (USA) leverages your analytical strengths within an international context, providing a structured pathway to understanding complex markets and building professional networks across different cultures.

- **7. Mechanical and Manufacturing Engineering**

- MTU Kerry
- **614** points
- **62.2%** similarity
- **Overview:** Mechanical and Manufacturing Engineering is a blended degree that brings in the best of manufacturing and mechanical engineering, culminating in flexible and adaptable engineers to meet industry needs. The REEdI student engineer will learn about the design and development of processes whilst also gaining an equally strong knowledge of the design, development and operation of products and equipment.
- **Why we recommended this:** Mechanical and Manufacturing Engineering matches your high technical and engineering interests, allowing you to apply logical analysis to the design and physical development of innovative industrial systems.

- **8. Actuarial & Financial Studies**

- University College Dublin
- **613** points
- **61.0%** similarity
- **Overview:** Studying UCD Actuarial & Financial Studies (BAFS) degree requires a multidisciplinary education in fields such as mathematics, economics, finance, statistics, risk management and professionalism. It takes a combination of strong analytical skills, business knowledge and understanding of human behaviour to design and manage programmes that control risk and guarantee sufficient funds for the insurance and pension sectors. Actuaries have traditionally worked mostly in the insurance and pensions industries but are increasingly moving into wider fields, where they can employ their range of skills. The course also opens up options to work in finance, investment and trading.
- **Why we recommended this:** Actuarial & Financial Studies aligns with your superior mathematical ability, training you to analyze risk and design secure financial futures for organizations using advanced statistical models.

- **9. Engineering with Management**

- Trinity College Dublin
 - **613** points
 - **58.2%** similarity
 - **Overview:** Engineering with Management is concerned with the analysis, design, improvement, installation, and management of integrated systems of people, finance, materials and equipment. Our graduates have the technical skills common to all excellent engineers, with this knowledge augmented by an understanding of the commercial and industrial environment and the ability to generate innovative solutions to the problems of the world.
 - **Why we recommended this:** Engineering with Management combines your strong technical engineering interests with your ability to interact with people, focusing on designing efficient systems and managing complex professional projects.
- **10. Law/Business Studies**
 - Trinity College Dublin
 - **613** points
 - **35.3%** similarity
 - **Overview:** Law The law degree will appeal to you if you are interested in society and how it works, how we regulate the relationships between people. Given the wide range of legal modules, the degree attracts students with a broad range of interests. Business Studies This four year programme offers the opportunity to focus upon the many areas of overlapping interest between the two disciplines, for example, the structure of companies and other forms of business organisation, competition law and regulation of markets, consumer law, labour law, finance and financial markets, taxation, the protection of intellectual property and international perspectives on law and business.
 - **Why we recommended this:** Law/Business Studies suits your structured thinking, allowing you to explore the logical frameworks of legal systems while understanding the practical mechanisms that drive the global commercial world.
- **11. Law/History**
 - Trinity College Dublin
 - **613** points
 - **40.0%** similarity
 - **Overview:** Law The law degree will appeal to you if you are interested in society and how it works, how we regulate the relationships between people. Given the wide range of legal modules, the degree attracts students with a broad range of interests. Those interested in politics are attracted to subjects such as constitutional law. History The History programme introduces students to the diversity of historical studies, which include modules covering medieval and modern periods, including Irish, European, and American history, as well as some modules exploring the skills and methods which historians use, and the kinds of debates in which historians engage.
 - **Why we recommended this:** Law/History utilizes your research capacity to analyze complex events and legal structures, providing a deep understanding of how society and regulations evolve over time.
- **12. Mathematics/Modern Language**
 - Trinity College Dublin
 - **613** points
 - **60.3%** similarity
 - **Overview:** Mathematics Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques. You can choose between German, Irish, Italian, Russian and Spanish. Apart from French and Irish all languages can be studied from both advanced and beginners level.
 - **Why we recommended this:** Mathematics/Modern Language satisfies your love for logical patterns and interest in languages, blending rigorous quantitative analysis with the communication skills needed in a global society.
- **13. Mathematics/Music**
 - Trinity College Dublin
 - **613** points
 - **50.9%** similarity
 - **Overview:** Mathematics Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques. Music Studying music will allow you to engage with a range of traditions to acquire a profound understanding of how music works in theory and in creative practice. If you are interested in understanding music's place in society, developing music technology skills, writing music, or improving your skills as an informed performer, this course could be for you.
 - **Why we recommended this:** Mathematics/Music allows you to apply your exceptional logical reasoning to both complex mathematical theories and the structured, creative patterns found within music theory and practice.
- **14. Mathematics/Philosophy**
 - Trinity College Dublin
 - **613** points
 - **51.7%** similarity
 - **Overview:** Mathematics Mathematics is a broad and diverse subject which is used to model, analyse and understand several applications in the physical and biological sciences, engineering, management science, economics and finance. Its numerous applications are naturally interwoven with the underlying theory which is essential in developing one's logical reasoning, quantitative skills and problem-solving techniques. Philosophy This course offers the opportunity to engage in depth with questions of metaphysics (about the fundamental nature of reality), epistemology (the theory of knowledge), ethics (theories of right and wrong), political philosophy (the nature of the just state), philosophy of religion (reasoning about God), philosophy of mind (questions about thought, language and reason) and various other areas.
 - **Why we recommended this:** Mathematics/Philosophy connects your analytical depth with abstract reasoning, challenging you to use logic to explore fundamental questions about reality, knowledge, and the foundations of thought.
- **15. Global Business**
 - Trinity College Dublin
 - **602** points
 - **50.8%** similarity
 - **Overview:** The Global Business degree is a unique programme, designed for students who wish to focus on business from the very beginning of their degree. The degree is both innovative and practical with a strong focus on experiential learning. Trinity Business School places an emphasis on blended learning, where academic excellence meets industry experience with a keen focus on how business operates within the global economy.
 - **Why we recommended this:** Global Business offers a practical and structured way to apply your problem-solving mindset to the international economy, focusing on how organizations operate and innovate globally.
- **16. Pharmacy**
 - Trinity College Dublin
 - **601** points

- 42.7% similarity
- **Overview:** Pharmacy is the study of all aspects of drugs, both natural and synthetic in origin, including their chemistry, their uses in medicines, and how they work within the body. Pharmacists work in a variety of settings - community pharmacies, hospitals, long-term care facilities, and within the pharmaceutical industry, to name just a few. In many respects, their role as a key healthcare professional is to help people achieve the best results from their medications. Optional Fifth Year:M.Sc. (Pharm) Master's Degree (NFQ Level 9) Optional.
- **Why we recommended this:** Pharmacy utilizes your scientific curiosity and desire to help others, focusing on the chemistry of medicines and the vital role of supporting patients' health and well-being.

- **17. Actuarial Mathematics**

- Dublin City University
- 589 points
- 60.8% similarity
- **Overview:** Actuarial Mathematics could be the perfect course for you. It's accredited by the Institute and Faculty of Actuaries, UK, meaning you may be exempt from some of the exams needed to qualify as an actuary in Ireland and the UK. Before you embark on learning essential actuarial knowledge and theories, you'll be given solid mathematical training. In your first two years, you'll study the fundamental mathematical principles that underpin the actuarial and financial models covered in later years. You'll also study computer programming, economics and accounting.
- **Why we recommended this:** Actuarial Mathematics caters to your top interest in math and your logical mindset, providing the rigorous training needed to solve complex financial problems using statistical models.

- **18. Biomedical, Health and Life Sciences**

- University College Dublin
- 589 points
- 45.0% similarity
- **Overview:** This course will appeal to those with a keen interest in science and in how research and technology can impact on human health. It is training scientists at the interface of science and medicine. You will learn how scientifically driven investigations can advance our knowledge of disease prevention, detection and treatment and translating these into clinical utility. The course will immerse you in modern medical and biological sciences and focus on the application of scientific developments. BHLS offers students a unique opportunity to complete a research project with a Principal Investigator in a biomedical research area that interests them and an opportunity to be involved in peer-reviewed publications.
- **Why we recommended this:** Biomedical, Health and Life Sciences aligns with your analytical strengths, allowing you to use scientific research to solve health challenges and impact disease prevention and treatment.

- **19. Law and French**

- Trinity College Dublin
- 589 points
- 48.3% similarity
- **Overview:** The Law and French degree programme offers a unique opportunity to study core and specialised legal modules but also the language, culture and political systems of France. Students must undertake an Erasmus year in France, exposing them to the law of that legal system.
- **Why we recommended this:** Law and French matches your interest in languages and your logical nature, combining the study of legal frameworks with the mastery of a second language in international contexts.
